Enlargement of Halligan Reservoir
Raise Halligan Dam approximately 25.4 feet providing 8,125 acre-feet of additional water storage resulting in approximately 133 acres of new inundation

Shared Components:
North Poudre Irrigation Company owns and operates the existing water stored at Halligan Reservoir.

This figure is a representation of where streamflow changes would occur when water is needed.

Winter Release Plan – 3 cubic feet per second released into the North Fork October through April.
Summer Low Flow Plan – 5 cubic feet per second released into the North Fork May through September.
Peak Flow Bypass Program - halts all diversions into Halligan Reservoir for the three days that coincide with the anticipated peak runoff flow events.
