Jarrett,

From the document it sounds like the entry and exit points for the directional bore are outside of waters of the U.S., including wetlands. If so, there won't be a discharge of fill material into waters of the U.S. Without a discharge of fill material there wouldn't be anything needed as far as section 404 CWA compliance.

Shane

Hi Shane,

I don't know if your office had the chance to review the document located at the link below for any CWA related compliance issues. The plan is to conduct horizontal directional drilling under the river between a designated send and receiving point. It has been our experience that directional drillers are not as accurate as they claim to be with where the drill is going to come out. To me it seems like there are not a lot of wetland or floodplain concerns, but I figured regulatory should get the chance to review the proposed action to make sure.

Please review the document and let me know if there are any CWA issues and what compliance needs to be done, or if we are cleared to move forward towards a signed FONSI.

V:\Construction General\Section 595 Program\FY19\Juliaetta\Engineering

Thank you,

Jarrett--

I just downloaded the environmental document from Andrew Kimmel. It's in the file. Let him/me know if you need more information!
