Initiated By: SH Date: 8.11.11 Time: 0930

Shipping Information

Shipper: (FedEx) UPS DHL Courier Client Other: _____ Multiple Packages: (Y) N

Shipping # (s):*				Sample Temperature (s):**			
1.	4485 0258 3333	6.		1.	2	6.	
2.	3403	7.		2.	ambient	7.	
3.	3425	8.		3.		8.	
4.		9.		4.		9.	
5.		10.		5.		10.	

*Numbered shipping lines correspond to Numbered Sample Temp lines

**Sample must be received at 4°C ± 2°C- If not, note contents below. Temperature variance does NOT affect the following: Metals-Liquid; Rad tests- Liquid or Solids; Perchlorate

Condition (Circle "Y" for yes, "N" for no and "N/A" for not applicable):

1.	(Y) N	Are there custody seals present on the cooler?	8.	Y (N)	Are there custody seals present on bottles?
2.	Y (N) N/A	Do custody seals on cooler appear to be tampered with?	9.	Y N (N/A)	Do custody seals on bottles appear to be tampered with?
3.	(Y) N	Were contents of cooler frisked after opening, but before unpacking?	10.	(Y) N N/A	Was sample received with proper pH[1]? (If not, make note below)
4.	(Y) N	Sample received with Chain of Custody?	11.	Y N (N/A)	Containers for C-14, H-3 & I-129/131 marked with "Do Not Preserve" label?
5.	(Y) N N/A	Does the Chain of Custody match sample ID's on the container(s)?	12.	(Y) N	Sample received in proper containers?
6.	Y (N)	Was sample received broken?	13.	Y (N) N/A	Headspace in VOA or TOX liquid samples? (If Yes, note sample ID's below)
7.	(Y) N	Is sample volume sufficient for analysis?	14.	Y N (N/A)	Was Internal COC/Workshare received?

[1] For DOE-AL (Pantex, LANL, Sandia) sites, pH of ALL containers received must be verified, EXCEPT VOA, TOX, Oil & Grease and soils.

Notes:

M
A04BW709SS0001 filtered & total and
6040A001
had pH of 7; per L.F. used HNO_3 lot K11059
to correct pH.

Corrective Action:

Case Narrative
LOT NUMBER: F1H120447

This report contains the analytical results for the 10 samples received under chain of custody by TestAmerica in St. Louis on August 12, 2011. These samples are associated with your Guteryl Steel project.

The analytical results included in this report meet all applicable quality control procedure requirements except as noted on the following page.

The test results in this report meet all DoD QSM 4.1 requirements for which accreditations are held by TestAmerica in St. Louis except as permitted or accepted by the client and/or site specific documentation. In addition, the test results in this report meet all NELAP requirements for parameters in which accreditations are held by TestAmerica in St. Louis. **TestAmerica St. Louis' Florida certification number is E87689.** Any exceptions to NELAP requirements are noted in the case narrative. The case narrative is an integral part of this report.

All chemical analysis results are based upon sample as received, wet weight, unless noted otherwise. All radiochemistry results are based upon sample as dried and ground with the exception of tritium and carbon-14, unless requested wet weight by the client.

Observations/Nonconformances
The coolers were received from 2-6° C. No observations or non-conformances were noted at the time of receipt.

Volatile Organics by GC/MS (SW-846 8260)

Batch: 1230199 and 1231041
Tertahydrofuran was removed from the initial calibration lowest point due to poor response. Isobutanol, n-Butanol, 2-Chloroethylvinyl ether, 4-Methyl-2-pentanone and 2-Hexanone were removed from the initial calibration highest point due to elevated response. Additionally, the surrogate compounds (Dibromofluoromethane, 1,2-Dichloroethane-d4, Toluene-d8 and 4-Bromofluorobenzene) were not spiked at the initial calibration highest point because the recoveries do not warrant the high concentration. The initial calibration still meets the minimum number of points and the reporting limits required. The compounds were removed within TestAmerica's selection of points policy.

Affected Samples:
F1H120447 (6): A04MW602D0001
F1H120447 (7): A04MW702DD0001
F1H120447 (9): A04DMW708DD0001
F1H120447 (10): A04DMW9002

Batch: 1230199
The internal standard(s) recovery is outside the lower QC limit, indicating a potential positive bias. There were no target analytes associated with this internal standard observed above the reporting limit in the sample; therefore the sample data was not adversely affected by this excursion.

Affected Samples:
F1H120447 (6): A04MW602D0001

Batch: 1231041
The sample was analyzed at a dilution due to high concentrations of target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

The internal standard recoveries are within QC limits as compared to the IS limits set by the CCV for this 12 hour clock. However, the client requirement for DOD4.1 has the IS limits set to the mid-point of the ICAL as requested. The internal standard(s) recovery is outside the lower QC limit, indicating a potential positive bias. There were no target analytes associated with this internal standard observed above the reporting limit in the sample; therefore the sample data was not adversely affected by this excursion.

Affected Samples:
F1H120447 (9): A04DMW708DD0001
F1H120447 (10): A04DMW9002

Inductively Coupled Plasma (ICP) Metals (SW-846 6010)

Batch: 1227139
The MS (MSD) recovery for calcium and sodium is outside the established QC limits. The said analyte concentration in the original sample is greater than four times the amount spiked, making percent recovery information ineffective. Method performance is demonstrated by acceptable LCS recovery.

Strontium was observed in the CCB above the reporting limit. Associated samples which exhibit concentrations greater than ten (10) times the concentrations observed in the CCB, do not require re-analysis.

The samples were analyzed at a dilution due to high concentrations of target and interfering analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H120447 (1): A04MW602D0001 DISSOLVED
F1H120447 (2): A04MW702DD0001 DISSOLVED
F1H120447 (3): A03AMW13D0001 DISSOLVED
F1H120447 (4): A04DMW708DD0001 DISSOLVED
F1H120447 (5): A04DMW9002 DISSOLVED
F1H120447 (6): A04MW602D0001
F1H120447 (7): A04MW702DD0001
F1H120447 (8): A03AMW13D0001
F1H120447 (9): A04DMW708DD0001
F1H120447 (10): A04DMW9002

Chloride (MCAWW 300.0A)

Batch: 1224148
The sampls was analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H120447 (6): A04MW602D0001
F1H120447 (7): A04MW702DD0001
F1H120447 (8): A03AMW13D0001
F1H120447 (9): A04DMW708DD0001
F1H120447 (10): A04DMW9002

Fluoride (MCAWW 300.0A)

Batch: 1224149
The sampls was analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H120447 (6): A04MW602D0001
F1H120447 (7): A04MW702DD0001
F1H120447 (8): A03AMW13D0001
F1H120447 (9): A04DMW708DD0001
F1H120447 (10): A04DMW9002

Sulfate (MCAWW 300.0A)

Batch: 1224153
The sampls was analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H120447 (6): A04MW602D0001
F1H120447 (7): A04MW702DD0001
F1H120447 (8): A03AMW13D0001
F1H120447 (9): A04DMW708DD0001
F1H120447 (10): A04DMW9002

Nitrite as N (MCAWW 300.0A)

Batch: 1224151
The following samples were reported ND at dilution for Nitrite, due to interference with Chloride in the undiluted runs. The reporting limit has been adjusted only for those targets reported from the dilution run.

The anion matrix spike solution contains all routine anions. Spiking technique, sample preparation and method compliance is demonstrated by the remaining acceptable MS recoveries. Poor matrix spike recoveries for Nitrite are attributed to matrix interference.

Affected Samples:
F1H120447 (6): A04MW602D0001
F1H120447 (7): A04MW702DD0001
F1H120447 (8): A03AMW13D0001
F1H120447 (9): A04DMW708DD0001
F1H120447 (10): A04DMW9002

Phosphate as P, Ortho (MCAWW 300.0A)

Batch: 1224152
The anion matrix spike solution contains all routine anions. Spiking technique, sample preparation and method compliance is demonstrated by the remaining acceptable MS recoveries. Poor matrix spike recoveries for Ortho Phos are attributed to matrix interference.

Affected Samples:
F1H120447 (6): A04MW602D0001
F1H120447 (7): A04MW702DD0001
F1H120447 (8): A03AMW13D0001
F1H120447 (9): A04DMW708DD0001
F1H120447 (10): A04DMW9002

Isotopic Uranium by Alpha Spectroscopy (EML A-01-R MOD)
There was insufficient sample provided to perform the sample duplicate, an LCS duplicate was used instead.

Affected Samples:
F1H120447 (1): A04MW602D0001 DISSOLVED
F1H120447 (2): A04MW702DD0001 DISSOLVED
F1H120447 (3): A03AMW13D0001 DISSOLVED
F1H120447 (4): A04DMW708DD0001 DISSOLVED
F1H120447 (5): A04DMW9002 DISSOLVED
F1H120447 (6): A04MW602D0001
F1H120447 (7): A04MW702DD0001
F1H120447 (8): A03AMW13D0001
F1H120447 (9): A04DMW708DD0001
F1H120447 (10): A04DMW9002

There was insufficient sample provided to perform the analysis at the method specified amount. A reduced sample amount was prepared. Count times were adjusted accordingly to meet client reporting limits. The Uranium reporting limit was achieved without adjustment to the count time.

Affected Samples:
F1H120447 (1): A04MW602D0001 DISSOLVED

Total Dissolved Solids (MCAWW 160.1)
The samples were analyzed at a dilution based on high concentrations of target analytes. The reporting limit has been adjusted accordingly.

Affected Samples:
F1H120447 (7): A04MW702DD0001

There were no other nonconformances or observations noted with any analysis on this lot.

Manual Integration:
Manual integration may have been preformed for certain analysis and/or samples. Raw sample data can be supplied upon request detailing the manual integration and reasons why.

Certification Statement:
I certify that this image, and all data packages produced from this image, accurately represent the data and is in compliance with the SAP requirements, both technically and for completeness, other than the conditions detailed above or in the sample data package case narrative. The data, contained in this electronic image and computer-readable EDD, have been authorized by the lab manager, or the manager's designee.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

*Numbered shipping lines correspond to Numbered Sample Temp lines

**Sample must be received at 4°C ± 2°C- If not, note contents below. Temperature variance does NOT affect the following: Metals-Liquid; Rad tests- Liquid or Solids; Perchlorate

Condition (Circle "Y" for yes, "N" for no and "N/A" for not applicable):

1.	(Y) N	Are there custody seals present on the cooler?	8.	Y (N)	Are there custody seals present on bottles?
2.	Y (N) N/A	Do custody seals on cooler appear to be tampered with?	9.	Y N (N/A)	Do custody seals on bottles appear to be tampered with?
3.	(Y) N	Were contents of cooler frisked after opening, but before unpacking?	10.	(Y) N N/A	Was sample received with proper pH[1]? (If not, make note below)
4.	(Y) N	Sample received with Chain of Custody?	11.	Y N (N/A)	Containers for C-14, H-3 & I-129/131 marked with "Do Not Preserve" label?
5.	(Y) N N/A	Does the Chain of Custody match sample ID's on the container(s)?	12.	(Y) N	Sample received in proper containers?
6.	Y (N)	Was sample received broken?	13.	Y (N) N/A	Headspace in VOA or TOX liquid samples? (If Yes, note sample ID's below)
7.	(Y) N	Is sample volume sufficient for analysis?	14.	Y N (N/A)	Was Internal COC/Workshare received?

[1] For DOE-AL (Pantex, LANL, Sandia) sites, pH of ALL containers received must be verified, EXCEPT VOA, TOX, Oil & Grease and soils.

Notes:

Case Narrative
LOT NUMBER: F1H130407

This report contains the analytical results for the 10 samples received under chain of custody by TestAmerica in St. Louis on August 13, 2011. These samples are associated with your Guteryl Steel project.

The analytical results included in this report meet all applicable quality control procedure requirements except as noted on the following page.

The test results in this report meet all DoD QSM 4.1 requirements for which accreditations are held by TestAmerica in St. Louis except as permitted or accepted by the client and/or site specific documentation. In addition, the test results in this report meet all NELAP requirements for parameters in which accreditations are held by TestAmerica in St. Louis. **TestAmerica St. Louis' Florida certification number is E87689.** Any exceptions to NELAP requirements are noted in the case narrative. The case narrative is an integral part of this report.

All chemical analysis results are based upon sample as received, wet weight, unless noted otherwise. All radiochemistry results are based upon sample as dried and ground with the exception of tritium and carbon-14, unless requested wet weight by the client.

Observations/Nonconformances
The coolers were received from 2-6° C. No observations or non-conformances were noted at the time of receipt.

Volatile Organics by GC/MS (SW-846 8260)

Batch: 1230199
Tertahydrofuran was removed from the initial calibration lowest point due to poor response. Isobutanol, n-Butanol, 2-Chloroethylvinyl ether, 4-Methyl-2-pentanone and 2-Hexanone were removed from the initial calibration highest point due to elevated response. Additionally, the surrogate compounds (Dibromofluoromethane, 1,2-Dichloroethane-d4, Toluene-d8 and 4-Bromofluorobenzene) were not spiked at the initial calibration highest point because the recoveries do not warrant the high concentration. The initial calibration still meets the minimum number of points and the reporting limits required. The compounds were removed within TestAmerica's selection of points policy.

There was insufficient sample volume to perform MS/MSD analysis. An LCS/LCSD was performed to demonstrate accuracy and replicate precision.

The samples were analyzed at a dilution due to high concentrations of target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

The sample surrogate recovery is outside established QC limits. This excursion is attributed to a matrix interference which is physically evident in the sample. These samples foamed at the 1X and at a 5X dilution. The samples are reported at 5X as the lowest RL. The samples were also analyzed at a 50X dilution for analytes with high concentrations. The original analysis had similar surrogate failures.

Affected Samples:
F1H130407 (1): A04BMW250001
F1H130407 (5): A04BMW9003

Inductively Coupled Plasma (ICP) Metals (SW-846 6010)

Batch: 1227139
The MS (MSD) recovery for calcium and sodium is outside the established QC limits. The said analyte concentration in the original sample is greater than four times the amount spiked, making percent recovery information ineffective. Method performance is demonstrated by acceptable LCS recovery. No further action is required.

Strontium was observed in the CCB above the reporting limit. Associated samples which exhibit concentrations greater than ten (10) times the concentrations observed in the CCB, do not require re-analysis. Original results are reported.

The samples were analyzed at a dilution due to high concentrations of target and interfering analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H130407 (1): A04BMW250001
F1H130407 (2): A02MW060001
F1H130407 (3): A02MW100001
F1H130407 (4): A02MW070001
F1H130407 (5): A04BMW9003
F1H130407 (6): A04BMW250001 DISSOLVED
F1H130407 (7): A02MW060001 DISSOLVED
F1H130407 (8): A02MW100001 DISSOLVED
F1H130407 (9): A02MW070001 DISSOLVED
F1H130407 (10): A04BMW9003 DISSOLVED

Nitrite as N (MCAWW 300.0A)

Batch: 1227060
The following samples were reported ND at dilution for Nitrite, due to interference with Chloride in the undiluted runs. The reporting limit has been adjusted only for those targets reported from the dilution run.

The samples were received in hold on 8/13/11 for IC analysis, but were re-run out of 48 hour hold for Nitrite in batch 1227060 on 8/15/11, due to a failed bracketing CCV in the 8/13/11 in-hold run.

The anion matrix spike solution contains all routine anions. Spiking technique, sample preparation and method compliance is demonstrated by the remaining acceptable MS recoveries. Poor matrix spike recoveries for Nitrite are attributed to matrix interference.

Affected Samples:
F1H130407 (1): A04BMW250001
F1H130407 (2): A02MW060001
F1H130407 (3): A02MW100001
F1H130407 (4): A02MW070001
F1H130407 (5): A04BMW9003

Chloride (MCAWW 300.0A)

Batch: 1227179
The anion matrix spike solution contains all routine anions. Spiking technique, sample preparation and method compliance is demonstrated by the remaining acceptable MS recoveries. Poor matrix spike recoveries for chloride are attributed to matrix interference.

The sampls was analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H130407 (1): A04BMW250001
F1H130407 (2): A02MW060001
F1H130407 (3): A02MW100001
F1H130407 (4): A02MW070001
F1H130407 (5): A04BMW9003

Fluoride (MCAWW 300.0A)

Batch: 1225019
The sampls was analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H130407 (1): A04BMW250001
F1H130407 (2): A02MW060001
F1H130407 (5): A04BMW9003

Phosphate as P, Ortho (MCAWW 300.0A)

Batch: 1225022
The anion matrix spike solution contains all routine anions. Spiking technique, sample preparation and method compliance is demonstrated by the remaining acceptable MS recoveries. Poor matrix spike recoveries for Ortho Phos are attributed to matrix interference.

Affected Samples:
F1H130407 (1): A04BMW250001
F1H130407 (2): A02MW060001
F1H130407 (3): A02MW100001
F1H130407 (4): A02MW070001
F1H130407 (5): A04BMW9003

Sulfate (MCAWW 300.0A)

Batch: 1230226
The sampls was analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H130407 (1): A04BMW250001
F1H130407 (2): A02MW060001
F1H130407 (3): A02MW100001
F1H130407 (4): A02MW070001
F1H130407 (5): A04BMW9003

Total Dissolvee Solids (MCAWW 160.1)
The samples were analyzed at a dilution based on high concentrations of target analytes. The reporting limit has been adjusted accordingly.

Affected Samples:
F1H130407 (1): A04BMW250001
F1H130407 (5): A04BMW9003

Isotopic Uranium by Alpha Spectroscopy (EML A-01-R MOD)
There was insufficient sample provided to perform the sample duplicate, an LCS duplicate was used instead.

Affected Samples:
F1H130407 (1): A04BMW250001
F1H130407 (2): A02MW060001
F1H130407 (3): A02MW100001

F1H130407 (7): A02MW060001 DISSOLVED
F1H130407 (8): A02MW100001 DISSOLVED
F1H130407 (9): A02MW070001 DISSOLVED
F1H130407 (10): A04BMW9003 DISSOLVED

There were no other nonconformances or observations noted with any analysis on this lot.

Manual Integration:
Manual integration may have been preformed for certain analysis and/or samples. Raw sample data can be supplied upon request detailing the manual integration and reasons why.

Certification Statement:
I certify that this image, and all data packages produced from this image, accurately represent the data and is in compliance with the SAP requirements, both technically and for completeness, other than the conditions detailed above or in the sample data package case narrative. The data, contained in this electronic image and computer-readable EDD, have been authorized by the lab manager, or the manager's designee.

METHODS SUMMARY

F1H130407

PARAMETER	ANALYTICAL METHOD	PREPARATION METHOD
Alkalinity	MCAWW 310.1	MCAWW 310.1
Chloride	MCAWW 300.0A	MCAWW 300.0A
Filterable Residue (TDS)	MCAWW 160.1	MCAWW 160.1
Fluoride	MCAWW 300.0A	MCAWW 300.0A
Isotopic Uranium by Alpha Spectroscopy	EML A-01-R MOD	
ICP-MS (6020A)	SW846 6020A	
Nitrate as N	MCAWW 300.0A	MCAWW 300.0A
Nitrite as N	MCAWW 300.0A	MCAWW 300.0A
Phosphate as P, Ortho	MCAWW 300.0A	MCAWW 300.0A
Sulfate	MCAWW 300.0A	MCAWW 300.0A
Trace Inductively Coupled Plasma (ICP) Metals	SW846 6010C	
Volatile Organics by GC/MS	SW846 8260B	SW846 5030B

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Case Narrative
LOT NUMBER: F1H160430

This report contains the analytical results for the six samples received under chain of custody by TestAmerica St. Louis on August 16, 2011. These samples are associated with your Guterl Steel project.

All applicable quality control procedures met method-specified acceptance criteria except as noted on the following page.

The test results in this report meet all NELAP requirements for parameters in which accreditations are held by TestAmerica St. Louis. Any exceptions to NELAP requirements are noted in the case narrative. **TestAmerica St. Louis' Florida certification number is E87689.** The case narrative is an integral part of this report.

This report shall not be reproduced, except in full, without the written approval of the laboratory.

This report is incomplete without the case narrative. All chemical analysis results are based upon sample as received, wet weight, unless noted otherwise. All radiochemistry results are based upon sample as dried and ground with the exception of tritium, unless requested wet weight by the client.

Observations/Nonconformances

Reference the chain of custody and condition upon receipt report for any variations on receipt conditions and temperature of samples on receipt.

Volatile Organics by GC/MS (SW-846 8260)

Batch: 1231041
Tertahydrofuran was removed from the initial calibration lowest point due to poor response. Isobutanol, n-Butanol, 2-Chloroethylvinyl ether, 4-Methyl-2-pentanone and 2-Hexanone were removed from the initial calibration highest point due to elevated response. Additionally, the surrogate compounds (Dibromofluoromethane, 1,2-Dichloroethane-d4, Toluene-d8 and 4-Bromofluorobenzene) were not spiked at the initial calibration highest point because the recoveries do not warrant the high concentration. The initial calibration still meets the minimum number of points and the reporting limits required. The compounds were removed within TestAmerica's selection of points policy.

Affected Samples:
F1H160430 (3): A04BMW706D0001
F1H160430 (4): A04DMW710D0001
F1H160430 (5): A04CMW711DD0001
F1H160430 (6): TRIP BLANK #1

The internal standard recoveries are within QC limits as compared to the IS limits set by the CCV for this 12 hour clock. However, the client requirement for DOD4.1 has the IS limits set to the mid-point of the ICAL as requested. The internal standard(s) recovery is outside the lower QC limit, indicating a potential positive bias. There were no target analytes associated with this internal standard observed above the reporting limit in the sample; therefore the sample data was not adversely affected by this excursion.

Affected Samples:
F1H160430 (3): A04BMW706D0001
F1H160430 (4): A04DMW710D0001
F1H160430 (6): TRIP BLANK #1

Inductively Coupled Plasma (ICP) Metals (SW-846 6010)

Batch: 1229104
Strontium was observed in the CCB above the acceptable QC limit (>3X MDL). Associated samples which are either non-detect for the contaminant or exhibit concentrations greater than ten (10) times the concentrations observed in the CCB, do not require re-analysis.

Affected Samples:
F1H160430 (1): A04BMW706D0001 DISSOLVED
F1H160430 (3): A04BMW706D0001

The samples were analyzed at a dilution due to high concentrations of target and interfering analytes. The reporting limit has been adjusted for the dilution.

The MS (MSD) recovery for calcium, magnesium and sodium is outside the established QC limits. The said analyte concentration in the original sample is greater than four times the amount spiked, making percent recovery information ineffective. Method performance is demonstrated by acceptable LCS recovery.

Affected Samples:
F1H160430 (1): A04BMW706D0001 DISSOLVED
F1H160430 (2): A04DMW710D0001 DISSOLVED
F1H160430 (3): A04BMW706D0001
F1H160430 (4): A04DMW710D0001

Chloride (MCAWW 300.0A)

Batch: 1228144
The sampls was analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H160430 (3): A04BMW706D0001
F1H160430 (4): A04DMW710D0001
F1H160430 (5): A04CMW711DD0001

Fluoride (MCAWW 300.0A)

Batch: 1228145
The sampls was analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H160430 (3): A04BMW706D0001

The sample was reported ND at dilution, due to high concentrations of other analytes, which masked the retention times for these anions in the undiluted analyses. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H160430 (5): A04CMW711DD0001

Sulfate (MCAWW 300.0A)

Batch: 1228149
The sampls was analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H160430 (3): A04BMW706D0001
F1H160430 (4): A04DMW710D0001
F1H160430 (5): A04CMW711DD0001

Nitrite as N (MCAWW 300.0A)

Batch: 1228147
The sample was reported ND at dilution, due to high concentrations of other analytes, which masked the retention times for these anions in the undiluted analyses. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H160430 (3): A04BMW706D0001
F1H160430 (4): A04DMW710D0001
F1H160430 (5): A04CMW711DD0001

Phosphate as P, Ortho (MCAWW 300.0A)

Batch: 1228148
The anion matrix spike solution contains all routine anions. Spiking technique, sample preparation and method compliance is demonstrated by the remaining acceptable MS recoveries. Poor matrix spike recoveries for Ortho Phos are attributed to matrix interference.

Affected Samples:
F1H160430 (3): A04BMW706D0001
F1H160430 (4): A04DMW710D0001
F1H160430 (5): A04CMW711DD0001

The samples were reported ND at dilution, due to high concentrations of other analytes, which masked the retention times for these anions in the undiluted analyses. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H160430 (3): A04BMW706D0001
F1H160430 (5): A04CMW711DD0001

Total Dissolved Solids (MCAWW 160.1)
The samples were analyzed at a dilution based on high concentrations of target analytes. The reporting limit has been adjusted accordingly.

Affected Samples:
F1H160430 (3): A04BMW706D0001
F1H160430 (5): A04CMW711DD0001

Isotopic Uranium by Alpha Spectroscopy (EML A-01-R MOD)
There was insufficient sample provided to perform the sample duplicate, an LCS duplicate was used instead.

Affected Samples:
F1H160430 (1): A04BMW706D0001 DISSOLVED
F1H160430 (2): A04DMW710D0001 DISSOLVED
F1H160430 (3): A04BMW706D0001
F1H160430 (4): A04DMW710D0001

There were no other nonconformances or observations noted with any analysis on this lot.

MLPHA	006	TRIP BLANK #1	08/15/11	

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Case Narrative
LOT NUMBER: F1H170425

This report contains the analytical results for the 13 samples received under chain of custody by TestAmerica in St. Louis on August 17, 2011. These samples are associated with your Guterl Steel project.

The analytical results included in this report meet all applicable quality control procedure requirements except as noted on the following page.

The test results in this report meet all DoD QSM 4.1 requirements for which accreditations are held by TestAmerica in St. Louis except as permitted or accepted by the client and/or site specific documentation. In addition, the test results in this report meet all NELAP requirements for parameters in which accreditations are held by TestAmerica in St. Louis. **TestAmerica St. Louis' Florida certification number is E87689.** Any exceptions to NELAP requirements are noted in the case narrative. The case narrative is an integral part of this report.

All chemical analysis results are based upon sample as received, wet weight, unless noted otherwise. All radiochemistry results are based upon sample as dried and ground with the exception of tritium and carbon-14, unless requested wet weight by the client.

Observations/Nonconformances
The coolers were received from 2-6° C. No observations or non-conformances were noted at the time of receipt.

Volatile Organics by GC/MS (SW-846 8260)

Batch: 1231041
Tertahydrofuran was removed from the initial calibration lowest point due to poor response. Isobutanol, n-Butanol, 2-Chloroethylvinyl ether, 4-Methyl-2-pentanone and 2-Hexanone were removed from the initial calibration highest point due to elevated response. Additionally, the surrogate compounds (Dibromofluoromethane, 1,2-Dichloroethane-d4, Toluene-d8 and 4-Bromofluorobenzene) were not spiked at the initial calibration highest point because the recoveries do not warrant the high concentration. The initial calibration still meets the minimum number of points and the reporting limits required. The compounds were removed within TestAmerica's selection of points policy.

The internal standard recoveries are within QC limits as compared to the IS limits set by the CCV for this 12 hour clock. However, the client requirement for DOD4.1 has the IS limits set to the mid-point of the ICAL as requested. The internal standard(s) recovery is outside the lower QC limit, indicating a potential positive bias. There were no target analytes associated with this internal standard observed above the reporting limit in the sample; therefore the sample data was not adversely affected by this excursion.

Affected Samples:
F1H170425 (7): A03MW606D0001
F1H170425 (13): TRIP BLANK #2

Inductively Coupled Plasma (ICP) Metals (SW-846 6010)

Batch: 1229104
Strontium was observed in the CCB above the acceptable QC limit (>3X MDL). Associated samples which are either non-detect for the contaminant or exhibit concentrations greater than ten (10) times the concentrations observed in the CCB, do not require re-analysis.

Affected Samples:
F1H170425 (12): A04CMW711DD0001

The samples were analyzed at a dilution due to high concentrations of target and interfering analytes. The reporting limit has been adjusted for the dilution.

The MS (MSD) recovery for calcium, magnesium, and sodium is outside the established QC limits. The said analyte concentration in the original sample is greater than four times the amount spiked, making percent recovery information ineffective. Method performance is demonstrated by acceptable LCS recovery.

Affected Samples:
F1H170425 (1): A03MW606D0001 DISSOLVED
F1H170425 (2): A03MW14D0001 DISSOLVED
F1H170425 (3): A03MW606DR0001 DISSOLVED
F1H170425 (4): A03MW15D0001 DISSOLVED
F1H170425 (5): A03MW17D0001 DISSOLVED
F1H170425 (6): A04CMW711DD0001 DISSOLVED
F1H170425 (7): A03MW606D0001
F1H170425 (8): A03MW14D0001
F1H170425 (9): A03MW606DR0001
F1H170425 (10): A03MW15D0001
F1H170425 (11): A03MW17D0001
F1H170425 (12): A04CMW711DD0001

Chloride (MCAWW 300.0A)

Batch: 1229091
The following samples were analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H170425 (7): A03MW606D0001
F1H170425 (8): A03MW14D0001
F1H170425 (9): A03MW606DR0001
F1H170425 (10): A03MW15D0001
F1H170425 (11): A03MW17D0001

Fluoride (MCAWW 300.0A)

Batch: 1329092
The following samples were analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H170425 (7): A03MW606D0001
F1H170425 (8): A03MW14D0001
F1H170425 (9): A03MW606DR0001
F1H170425 (10): A03MW15D0001

Nitrite (MCAWW 300.0A)

Batch: 1229094
The following samples were reported ND at dilution for Nitrite, due to a matrix interference with Chloride, which masked the Nitrite retention time in the undiluted analyses. The reporting limit has been adjusted only for those targets reported from the dilution run.

The anion matrix spike solution contains all routine anions. Spiking technique, sample preparation and method compliance is demonstrated by the remaining acceptable MS recoveries. Poor matrix spike recoveries for are attributed to matrix interference.

Affected Samples:
F1H170425 (7): A03MW606D0001
F1H170425 (8): A03MW14D0001
F1H170425 (9): A03MW606DR0001
F1H170425 (10): A03MW15D0001
F1H170425 (11): A03MW17D0001

Orthophosphate as P (MCAWW 300.0A)

Batch: 1229095
The anion matrix spike solution contains all routine anions. Spiking technique, sample preparation and method compliance is demonstrated by the remaining acceptable MS recoveries. Poor matrix spike recoveries for Ortho Phos are attributed to matrix interference.

Affected Samples:
F1H170425 (7): A03MW606D0001
F1H170425 (8): A03MW14D0001
F1H170425 (9): A03MW606DR0001
F1H170425 (10): A03MW15D0001
F1H170425 (11): A03MW17D0001

Isotopic Uranium by Alpha Spectroscopy (EML A-01-R MOD)
There was insufficient sample provided to perform the sample duplicate, an LCS duplicate was used instead.

Affected Samples:
F1H170425 (1): A03MW606D0001 DISSOLVED
F1H170425 (2): A03MW14D0001 DISSOLVED
F1H170425 (3): A03MW606DR0001 DISSOLVED
F1H170425 (4): A03MW15D0001 DISSOLVED
F1H170425 (5): A03MW17D0001 DISSOLVED
F1H170425 (6): A04CMW711DD0001 DISSOLVED
F1H170425 (7): A03MW606D0001
F1H170425 (8): A03MW14D0001
F1H170425 (9): A03MW606DR0001
F1H170425 (10): A03MW15D0001
F1H170425 (11): A03MW17D0001
F1H170425 (12): A04CMW711DD0001

The Uranium samples have tracer recoveries below the 30% QC limit. The samples were re-extracted. The re-extracted samples results will be reported with this narrative.

Affected Samples:
F1H170425 (2): A03MW14D0001 DISSOLVED
F1H170425 (6): A04CMW711DD0001 DISSOLVED
F1H170425 (11): A03MW17D0001

The reporting limit for Uranium was not met due to reduced tracer recovery. The tracer recovery is within acceptance criteria. Analytical results are reported.

Affected Samples:
F1H170425 (3): A03MW606DR0001 DISSOLVED
F1H170425 (12): A04CMW711DD0001

There were no other nonconformances or observations noted with any analysis on this lot.

Manual Integration:
Manual integration may have been preformed for certain analysis and/or samples. Raw sample data can be supplied upon request detailing the manual integration and reasons why.

Certification Statement:
I certify that this image, and all data packages produced from this image, accurately represent the data and is in compliance with the SAP requirements, both technically and for completeness, other than the conditions detailed above or in the sample data package case narrative. The data, contained in this electronic image and computer-readable EDD, have been authorized by the lab manager, or the manager's designee.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Lot #(s): FHH170425 TestAmerica St. Louis

CUR Form #: 1 1 3

CONDITION UPON RECEIPT FORM

Client: Shaw

Quote No: 89251

COC/RFA No: 010

Initiated By: EN Date: 8.17.11 Time: 0915

Shipping Information

Shipper: (FedEx) UPS DHL Courier Client Other: _____ Multiple Packages: (Y) N

Shipping # (s):*				Sample Temperature (s):**			
1.	4855 0258 4330	6.		1.	↑	6.	
2.	4329	7.		2.	ambient	7.	
3.	4318	8.		3.	3	8.	
4.		9.		4.		9.	
5.		10.		5.		10.	

*Numbered shipping lines correspond to Numbered Sample Temp lines

**Sample must be received at 4°C ± 2°C- If not, note contents below. Temperature variance does NOT affect the following: Metals-Liquid; Rad tests- Liquid or Solids; Perchlorate

Condition (Circle "Y" for yes, "N" for no and "N/A" for not applicable):

1.	(Y) N	Are there custody seals present on the cooler?	8.	Y (N)	Are there custody seals present on bottles?
2.	Y (N) N/A	Do custody seals on cooler appear to be tampered with?	9.	Y N (N/A)	Do custody seals on bottles appear to be tampered with?
3.	(Y) N	Were contents of cooler frisked after opening, but before unpacking?	10.	(Y) N N/A	Was sample received with proper pH[1]? (If not, make note below)
4.	(Y) N	Sample received with Chain of Custody?	11.	Y N (N/A)	Containers for C-14, H-3 & I-129/131 marked with "Do Not Preserve" label?
5.	Y (N) N/A	Does the Chain of Custody match sample ID's on the container(s)?	12.	(Y) N	Sample received in proper containers?
6.	Y (N)	Was sample received broken?	13.	Y (N) N/A	Headspace in VOA or TOX liquid samples? (If Yes, note sample ID's below)
7.	(Y) N	Is sample volume sufficient for analysis?	14.	Y N (N/A)	Was Internal COC/Workshare received?

[1] For DOE-AL (Pantex, LANL, Sandia) sites, pH of ALL containers received must be verified, EXCEPT VOA, TOX, Oil & Grease and soils.

Notes:

second sample - labels have ms "D"
4th
5th

perf logged per chain.

Corrective Action:

☐ Client Contact Name: _____ Informed by: _____

☐ Sample(s) processed "as is"

☐ Sample(s) on hold until: _____ If released, notify: _____

Project Management Review: _____ Date: 8/18/11

THIS FORM MUST BE COMPLETED AT THE TIME THE ITEMS ARE BEING CHECKED IN. IF ANY ITEM IS COMPLETED BY SOMEONE OTHER THAN THE INITIATOR, THEN THAT PERSON IS REQUIRED TO APPLY THEIR INITIAL AND THE DATE NEXT TO THAT ITEM.

Case Narrative
LOT NUMBER: F1H190431

This report contains the analytical results for the 14 samples received under chain of custody by TestAmerica in St. Louis on August 19, 2011. These samples are associated with your Guterl Steel project.

The analytical results included in this report meet all applicable quality control procedure requirements except as noted on the following page.

The test results in this report meet all DoD QSM 4.1 requirements for which accreditations are held by TestAmerica in St. Louis except as permitted or accepted by the client and/or site specific documentation. In addition, the test results in this report meet all NELAP requirements for parameters in which accreditations are held by TestAmerica in St. Louis. **TestAmerica St. Louis' Florida certification number is E87689.** Any exceptions to NELAP requirements are noted in the case narrative. The case narrative is an integral part of this report.

All chemical analysis results are based upon sample as received, wet weight, unless noted otherwise. All radiochemistry results are based upon sample as dried and ground with the exception of tritium and carbon-14, unless requested wet weight by the client.

Observations/Nonconformances
The coolers were received from 2-6° C. No observations or non-conformances were noted at the time of receipt.

Volatile Organics by GC/MS (SW-846 8260)

Batch: 1237141
The CCV recovery was outside the upper QC limit (greater than 20% D) for Vinyl acetate, Carbon Tetrachloride, 1,1,2,2-Tetrachloroethane, sec-Butylbenzene, Nonanal and 1,2-Dibromo-3-chlopropane indicating a potential high bias for those analytes in the samples associated with this CCV. These analytes were not detected above the reporting limit or were not target analytes in the associated samples.

The CCV recoveries are outside the lower QC limit (greater than 20% D) for Naphthalene indicating a potential low bias for those analytes in the samples associated with this CCV. This analyte is not a target analytes in the associated samples.

The LCS recovery for 1,1,2,2-Tetrachloroethane is outside the upper QC limit, indicating a potential positive bias for that analytes. This analyte was not observed above the reporting limit in the associated samples; therefore the sample data was not adversely affected by this excursion.

The MS ans MSD recoveries for 1,1,2,2-Tetrachloroethane are outside the upper QC limit, indicating a potential positive bias for that analytes. These analytes were not observed above the reporting limit in the associated samples; therefore the sample data was not adversely affected by this excursion.

The MSD recovery for 1,1,1-Trichloroethane, 1,2-Dichloroethene and 1,2-Dichloroethene (total) are outside the established QC limits. The RPD is within method acceptance criteria indicating matrix interference. Method performance is demonstrated by acceptable LCS recovery.

Affected Samples:
F1H190431 (7): A04DMW710DD0001
F1H190431 (8): A04DFB710DD0001
F1H190431 (9): A04DMW712DD0001
F1H190431 (10): A04BMW707DD0001
F1H190431 (14): TRIP BLANK #3

Inductively Coupled Plasma (ICP) Metals (SW-846 6010)

Batch: 1234136
The MS and MSD recoveries for calcium and sodium are outside the established QC limits. The said analyte concentration in the original sample is greater than four times the amount spiked, making percent recovery information ineffective. Method performance is demonstrated by acceptable LCS recovery.

The samples were analyzed at a dilution due to high concentrations of target and interfering analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H190431 (1): A04DMW710DD0001 DISSOLVED
F1H190431 (2): A04DFB710DD0001 DISSOLVED
F1H190431 (3): A04DMW712DD0001 DISSOLVED
F1H190431 (4): A04AMW610D0001 DISSOLVED
F1H190431 (5): A04AMW200001 DISSOLVED
F1H190431 (6): A04AM2100001 DISSOLVED

F1H190431 (11): A04AMW610D0001
F1H190431 (12): A04AMW200001
F1H190431 (13): A04AMW210001

Chloride (MCAWW 300.0A)

Batch: 1231100
The following samples were analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H190431 (7): A04DMW710DD0001
F1H190431 (9): A04DMW712DD0001
F1H190431 (11): A04AMW610D0001
F1H190431 (12): A04AMW200001
F1H190431 (13): A04AMW210001

Sulfate (MCAWW 300.0A)

Batch: 1231105
The following samples were analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H190431 (7): A04DMW710DD0001
F1H190431 (9): A04DMW712DD0001
F1H190431 (11): A04AMW610D0001
F1H190431 (12): A04AMW200001
F1H190431 (13): A04AMW210001

Nitrate (MCAWW 300.0A)

Batch: 1231102
The following samples were analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H190431 (12): A04AMW200001

Nitrite (MCAWW 300.0A)

Batch: 1231103
The following samples were reported ND at dilution for Nitrite, due to high concentrations of Chloride, which masked the retention time for Nitrite in the undiluted analyses. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H190431 (9): A04DMW712DD0001
F1H190431 (11): A04AMW610D0001
F1H190431 (12): A04AMW200001
F1H190431 (13): A04AMW210001

The anion matrix spike solution contains all routine anions. Spiking technique, sample preparation and method compliance is demonstrated by the remaining acceptable MS recoveries. Poor matrix spike recoveries for Nitrite are attributed to matrix interference.

Affected Samples:
F1H190431 (7): A04DMW710DD0001
F1H190431 (8): A04DFB710DD0001
F1H190431 (9): A04DMW712DD0001
F1H190431 (11): A04AMW610D0001
F1H190431 (12): A04AMW200001
F1H190431 (13): A04AMW210001

Orthophosphate (MCAWW 033.0A)

Batch: 1231104
The anion matrix spike solution contains all routine anions. Spiking technique, sample preparation and method compliance is demonstrated by the remaining acceptable MS recoveries. Poor matrix spike recoveries Ortho Phos in batch are attributed to matrix interference.

Affected Samples:
F1H190431 (7): A04DMW710DD0001
F1H190431 (8): A04DFB710DD0001
F1H190431 (9): A04DMW712DD0001

There were no other nonconformances or observations noted with any analysis on this lot.

Manual Integration:
Manual integration may have been preformed for certain analysis and/or samples. Raw sample data can be supplied upon request detailing the manual integration and reasons why.

Certification Statement:
I certify that this image, and all data packages produced from this image, accurately represent the data and is in compliance with the SAP requirements, both technically and for completeness, other than the conditions detailed above or in the sample data package case narrative. The data, contained in this electronic image and computer-readable EDD, have been authorized by the lab manager, or the manager's designee.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Case Narrative
LOT NUMBER: F1H230407

This report contains the analytical results for the nine samples received under chain of custody by TestAmerica in St. Louis on August 23, 2011. These samples are associated with your Guterl Steel project.

The analytical results included in this report meet all applicable quality control procedure requirements except as noted on the following page.

The test results in this report meet all DoD QSM 4.1 requirements for which accreditations are held by TestAmerica in St. Louis except as permitted or accepted by the client and/or site specific documentation. In addition, the test results in this report meet all NELAP requirements for parameters in which accreditations are held by TestAmerica in St. Louis. **TestAmerica St. Louis' Florida certification number is E87689.** Any exceptions to NELAP requirements are noted in the case narrative. The case narrative is an integral part of this report.

All chemical analysis results are based upon sample as received, wet weight, unless noted otherwise. All radiochemistry results are based upon sample as dried and ground with the exception of tritium and carbon-14, unless requested wet weight by the client.

Observations/Nonconformances

The coolers were received from 2-6° C. No observations or non-conformances were noted at the time of receipt.

Volatile Organics by GC/MS (SW-846 8260)

Batch: 1237192
The CCV recoveries are outside the upper QC limit (greater than 20% D) for Bromomethane, Chloroethane, Trichlorofluoromethane and 1,2,3-Trichloropropane indicating a potential high bias for those analytes in the samples associated with this CCV. These analytes were not detected above the reporting limit or were not target analytes in the associated samples.

The LCS recovery for Bromomethane is outside the upper QC limit, indicating a potential positive bias for this analyte. This analyte was not observed above the reporting limit in the associated samples; therefore the sample data was not adversely affected by this excursion.

Affected Samples:
F1H230407 (5): TRIP BLANK #5
F1H230407 (7): A02MW50001
F1H230407 (8): A02MW120001
F1H230407 (9): A02MW30001

The samples were analyzed at a dilution based upon laboratory screening information. The reporting limit has been adjusted for the dilution.

Affected Samples:
F1H230407 (7): A02MW50001

Batch: 124401
The MS/MSD analysis was not performed with this batch; the associated samples are dilutions only. The MS/MSD was performed with original analyses. An LCS/LCSD was performed to demonstrate accuracy and replicate precision.

The samples were analyzed at a dilution due to high concentrations of target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

The %RSD for Ethyl acetate exceeds the acceptance criteria. The analyte will not be reported from this ICAL.

The following compounds were removed from the initial calibration lowest point due to poor response. Ethyl ether, Methyl acetate, Acetontrile, Ethyl acetate, 2-Butanone, Isobutanol, 1,4-dioxane, 2-Nitropropane and Cyclohexanone. Addtionally, Acetone was removed from the lowest 2 points.

n-Propylbenzene and sec-Butylbenzene were removed from the initial calibration highest point due to elevated response. Additionally, the surrogate compounds (Dibromofluoromethane, 1,2-Dichloroethane-d4, Toluene-d8 and 4-Bromofluorobenzene) were not spiked at the initial calibration highest point because the recoveries do not warrant the high concentration.

The initial calibration still meets the minimum number of points and the reporting limits required. The compounds were removed within TestAmerica's selection of points policy.

Affected Samples:
F1H230407 (7): A02MW50001
F1H230407 (8): A02MW120001

Inductively Coupled Plasma (ICP) Metals (SW-846 6010)

Batch: 1236078
There was insufficient digestate volume for the analysis of thallium. The samples were re-prepared and the re-extract batch is 1242041.

The samples were analyzed at a dilution due to high concentrations of target and interfering analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

The serial dilution for sodium is outside of method acceptance criteria indicating matrix interference. All associated samples are flagged accordingly.

1236078-F1H230407-007
The MS (MSD) recovery for calcium is outside the established QC limits. The said analyte concentration in the original sample is greater than four times the amount spiked, making percent recovery information ineffective. Method performance is demonstrated by acceptable LCS recovery.

1236078-F1H230407-002
The MS (MSD) recovery for strontium is outside the established QC limits. The RPD is within method acceptance criteria indicating matrix interference. Method performance is demonstrated by acceptable LCS recovery.

Affected Samples:
F1H230407 (1): A02MW600D0001 DISSOLVED
F1H230407 (2): A02MW50001 DISSOLVED
F1H230407 (3): A02MW120001 DISSOLVED
F1H230407 (4): A02MW30001 DISSOLVED
F1H230407 (6): A02M600D0001
F1H230407 (7): A02MW50001
F1H230407 (8): A02MW120001
F1H230407 (9): A02MW30001

The concentration of strontium in the CCB is greater than 2 times the MDL. The samples associated with this CCB exhibit concentrations greater than ten times the concentrations observed in the CCB.

Affected Samples:
F1H230407 (7): A02MW50001
F1H230407 (9): A02MW30001

Chloride (MCAWW 300.0A)

Batch: 1235141
The following samples were analyzed at a dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H230407 (6): A02M600D0001
F1H230407 (7): A02MW50001
F1H230407 (9): A02MW30001

Nitrate (MCAWW 300.0A)

Batch: 1235143
The following samples were analyzed at a dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H230407 (6): A02M600D0001
F1H230407 (7): A02MW50001
F1H230407 (9): A02MW30001

Sulfate (MCAWW 300.0A)

Batch: 1235146
The following samples were analyzed at a dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H230407 (6): A02M600D0001
F1H230407 (7): A02MW50001
F1H230407 (8): A02MW120001
F1H230407 (9): A02MW30001

Fluoride (MCAWW 300.0A)

Batch: 1235142
The following samples were reported ND at a dilution, due to matrix interferences, which masked the target retention times in the undiluted analyses. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H230407 (6): A02M600D0001

Nitrite (MCAWW 300.0A)

Batch: 1235144
The following samples were reported ND at a dilution, due to matrix interferences, which masked the target retention times in the undiluted analyses. The reporting limit has been adjusted only for those targets reported from the dilution run.

The anion matrix spike solution contains all routine anions. Spiking technique, sample preparation and method compliance is demonstrated by the remaining acceptable MS recoveries. Poor matrix spike recoveries for Nitrite are attributed to matrix interference.

Affected Samples:
F1H230407 (6): A02M600D0001
F1H230407 (7): A02MW50001
F1H230407 (8): A02MW120001
F1H230407 (9): A02MW30001

Orthophosphate as P (MCAWW 300.0A)

Batch: 1235145
The anion matrix spike solution contains all routine anions. Spiking technique, sample preparation and method compliance is demonstrated by the remaining acceptable MS recoveries. Poor matrix spike recoveries for Nitrite are attributed to matrix interference.

Affected Samples:
F1H230407 (6): A02M600D0001
F1H230407 (7): A02MW50001
F1H230407 (8): A02MW120001
F1H230407 (9): A02MW30001

Filteralbe residue (TDS) (MCAWW 160.1)

Batch: 1238124
The sample was analyzed at a dilution based on high concentrations of target analytes. The reporting limit has been adjusted accordingly.

Affected Samples:
F1H230407 (6): A02M600D0001

Isotopic Uranium by Alpha Spectroscopy (EML A-01-R MOD)
There was insufficient sample to perform the sample duplicate.

Affected Samples:
F1H230407 (1): A02MW600D0001 DISSOLVED
F1H230407 (2): A02MW50001 DISSOLVED
F1H230407 (3): A02MW120001 DISSOLVED
F1H230407 (4): A02MW30001 DISSOLVED
F1H230407 (6): A02M600D0001
F1H230407 (7): A02MW50001
F1H230407 (8): A02MW120001
F1H230407 (9): A02MW30001

Manual Integration:
Manual integration may have been preformed for certain analysis and/or samples. Raw sample data can be supplied upon request detailing the manual integration and reasons why.

Certification Statement:
I certify that this image, and all data packages produced from this image, accurately represent the data and is in compliance with the SAP requirements, both technically and for completeness, other than the conditions detailed above or in the sample data package case narrative. The data, contained in this electronic image and computer-readable EDD, have been authorized by the lab manager, or the manager's designee.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

CONDITION UPON RECEIPT FORM

Client: Shaw

Quote No: 89151

COC/RFA No: 013

Initiated By: SW Date: 8.23.11 Time: 0905

Shipping Information

Shipper: (FedEx) UPS DHL Courier Client Other: _____ Multiple Packages: (Y) N

Shipping # (s):*				Sample Temperature (s):**			
1.	4485 0258 4877	6.		1.	ambient	6.	
2.	4866	7.		2.	↓	7.	
3.	4855	8.		3.		8.	
4.		9.		4.		9.	
5.		10.		5.		10.	

*Numbered shipping lines correspond to Numbered Sample Temp lines

**Sample must be received at 4°C ± 2°C- If not, note contents below. Temperature variance does NOT affect the following: Metals-Liquid; Rad tests- Liquid or Solids; Perchlorate

Condition (Circle "Y" for yes, "N" for no and "N/A" for not applicable):

1.	(Y) N	Are there custody seals present on the cooler?	8.	Y (N)	Are there custody seals present on bottles?
2.	Y N (N/A)	Do custody seals on cooler appear to be tampered with?	9.	Y N (N/A)	Do custody seals on bottles appear to be tampered with?
3.	(Y) N	Were contents of cooler frisked after opening, but before unpacking?	10.	(Y) N N/A	Was sample received with proper pH[1]? (If not, make note below)
4.	(Y) N	Sample received with Chain of Custody?	11.	Y N (N/A)	Containers for C-14, H-3 & I-129/131 marked with "Do Not Preserve" label?
5.	Y (N) N/A	Does the Chain of Custody match sample ID's on the container(s)?	12.	(Y) N	Sample received in proper containers?
6.	Y (N)	Was sample received broken?	13.	Y (N) N/A	Headspace in VOA or TOX liquid samples? (If Yes, note sample ID's below)
7.	(Y) N	Is sample volume sufficient for analysis?	14.	Y N (N/A)	Was Internal COC/Workshare received?

[1] For DOE-AL (Pantex, LANL, Sandia) sites, pH of ALL containers received must be verified, EXCEPT VOA, TOX, Oil & Grease and soils.

Notes:

Sample 1. we rec'd. A05BMW600D0001. The QC bottles read "A03" but the sample reads "A02."

A03 Should be A02 MS/MSD[2] Please use COC A0200 LMF 8/23/11 SW 8.23.11

Case Narrative
LOT NUMBER: F1H230464

This report contains the analytical results for the 14 samples received under chain of custody by TestAmerica in St. Louis on August 23, 2011. These samples are associated with your Guterl Steel project.

The analytical results included in this report meet all applicable quality control procedure requirements except as noted on the following page.

The test results in this report meet all DoD QSM 4.1 requirements for which accreditations are held by TestAmerica in St. Louis except as permitted or accepted by the client and/or site specific documentation. In addition, the test results in this report meet all NELAP requirements for parameters in which accreditations are held by TestAmerica in St. Louis. **TestAmerica St. Louis' Florida certification number is E87689.** Any exceptions to NELAP requirements are noted in the case narrative. The case narrative is an integral part of this report.

All chemical analysis results are based upon sample as received, wet weight, unless noted otherwise. All radiochemistry results are based upon sample as dried and ground with the exception of tritium and carbon-14, unless requested wet weight by the client.

Observations/Nonconformances

The coolers were received from 2-6° C. No observations or non-conformances were noted at the time of receipt.

Volatile Organics by GC/MS (SW-846 8260)

Batch: 1237192
The CCV recoveries are outside the upper QC limit (greater than 20% D) for Bromomethane, Chloroethane, Trichlorofluoromethane and 1,2,3-Trichloropropane indicating a potential high bias for those analytes in the samples associated with this CCV. These analytes were not detected above the reporting limit or were not target analytes in the associated samples.

The LCS recovery for Bromomethane is outside the upper QC limit, indicating a potential positive bias for that analyte. This analyte was not observed above the reporting limit in the associated samples; therefore the sample data was not adversely affected by this excursion.

Affected Samples:
F1H230464 (2): A03MW703DD0001
F1H230464 (4): A02MW40001
F1H230464 (6): A04AMW701DD0001
F1H230464 (8): TRIP BLANK #4

Batch: 1244011
The samples were analyzed at a dilution based upon laboratory screening information. The reporting limit has been adjusted for the dilution.

The MS/MSD analysis was not performed with this batch; the associated samples are dilutions only. The MS/MSD was performed with the original analyses. An LCS/LCSD was performed to demonstrate accuracy and replicate precision.

The following compounds were removed from the initial calibration lowest point due to poor response. Ethyl ether, Methyl acetate, Acetontrile, Ethyl acetate, 2-Butanone, Isobutanol, 1,4-dioxane, 2-Nitropropane and Cyclohexanone. Addtionally, Acetone was removed from the lowest 2 points.

n-Propylbenzene and sec-Butylbenzene were removed from the initial calibration highest point due to elevated response. Additionally, the surrogate compounds (Dibromofluoromethane, 1,2-Dichloroethane-d4, Toluene-d8 and 4-Bromofluorobenzene) were not spiked at the initial calibration highest point because the recoveries do not warrant the high concentration.

The initial calibration still meets the minimum number of points and the reporting limits required. The compounds were removed within TestAmerica's selection of points policy.

Affected Samples:
F1H230464 (4): A02MW40001

Inductively Coupled Plasma (ICP) Metals (SW-846 6010)

Batch: 1236079
There was insufficient digestate volume for analysis of thallium. Samples have been reprepared and the re-extract batch is 1242042.

The samples were analyzed at a dilution due to high concentrations of target and interfering analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

The serial dilution for aluminum is outside the established QC limits, indicating matrix interference.

1236079-F1H230464-002
The MS and MSD recovery for calcium and sodium are outside the established QC limits. The said analyte concentration in the original sample is greater than four times the amount spiked, making percent recovery information ineffective. Method performance is demonstrated by acceptable LCS recovery.

1236079-F1H230464-010
The MS and MSD recovery for calcium, magnesium and sodium are outside the established QC limits. The said analyte concentration in the original sample is greater than four times the amount spiked, making percent recovery information ineffective. Method performance is demonstrated by acceptable LCS recovery.

The MS and MSD recovries for strontium are outside the established QC limits. The RPD is within method acceptance criteria indicating matrix interference. Method performance is demonstrated by acceptable LCS recovery.

Affected Samples:
F1H230464 (1): A03MW607D001
F1H230464 (2): A03MW703DD0001
F1H230464 (3): A03MW16D0001
F1H230464 (4): A02MW40001
F1H230464 (5): A03MW9004
F1H230464 (6): A04AMW701DD0001
F1H230464 (9): A03MW607D0001 DISSOLVED
F1H230464 (10): A03MW703DD0001 DISSOLVED
F1H230464 (11): A03MW16D0001 DISSOLVED
F1H230464 (12): A02MW40001 DISSOLVED
F1H230464 (13): A03MW9004 DISSOLVED
F1H230464 (14): A04AMW701DD0001 DISSOLVED

The concentration of strontium in the CCB is greater than 2 times the MDL. The samples associated with this CCB exhibit concentrations greater than ten times the concentrations observed in the CCB.

Affected Samples:
F1H230464 (1): A03MW607D001
F1H230464 (2): A03MW703DD0001
F1H230464 (6): A04AMW701DD0001
F1H230464 (9): A03MW607D0001 DISSOLVED
F1H230464 (10): A03MW703DD0001 DISSOLVED
F1H230464 (14): A04AMW701DD0001 DISSOLVED

Alkalinity (MCAWW 310.1)

Batch: 1242085
The MS recovery was outside the established QC limits. The analyte concentration in the original sample is greater than four times the amounted spiked, making percent recovery information ineffective. Method performance is demonstrated by acceptable LCS recovery.

Affected Samples:
F1H230464 (2): A03MW703DD0001

Chloride (MCAWW 300.0A)

Batch: 1235169
The following samples were analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H230464 (1): A03MW607D001
F1H230464 (2): A03MW703DD0001
F1H230464 (3): A03MW16D0001
F1H230464 (4): A02MW40001
F1H230464 (5): A03MW9004
F1H230464 (6): A04AMW701DD0001
F1H230464 (7): A04BMW707DD0001

Sulfate (MCAWW 300.0A)

Batch: 1235174
The following samples were analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H230464 (1): A03MW607D001
F1H230464 (2): A03MW703DD0001
F1H230464 (3): A03MW16D0001
F1H230464 (4): A02MW40001
F1H230464 (5): A03MW9004
F1H230464 (6): A04AMW701DD0001
F1H230464 (7): A04BMW707DD0001

Fluoride (MCAWW 300.0A)

Batch: 1235170
The anion matrix spike solution contains all routine anions. Spiking technique, sample preparation and method compliance is demonstrated by the remaining acceptable MS recoveries. Poor matrix spike recoveries for Fluoride are attributed to matrix interference.

Affected Samples:
F1H230464 (1): A03MW607D001
F1H230464 (2): A03MW703DD0001
F1H230464 (3): A03MW16D0001
F1H230464 (4): A02MW40001
F1H230464 (5): A03MW9004
F1H230464 (6): A04AMW701DD0001
F1H230464 (7): A04BMW707DD0001

The following samples were analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H230464 (1): A03MW607D001
F1H230464 (3): A03MW16D0001
F1H230464 (5): A03MW9004

The following samples were reported ND at dilution, due to high concentrations of interfering anions, which masked the retention times of these target analytes in the undiluted analyses. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H230464 (7): A04BMW707DD0001

Nitrate (MCAWW 300.0A)

Batch: 1235171
The following samples were analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H230464 (7): A04BMW707DD0001

Orthophosphate as P (MCAWW 300.0A)

Batch: 1235173
The following samples were reported ND at dilution, due to high concentrations of interfering anions, which masked the retention times of these target analytes in the undiluted analyses. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H230464 (7): A04BMW707DD0001

The anion matrix spike solution contains all routine anions. Spiking technique, sample preparation and method compliance is demonstrated by the remaining acceptable MS recoveries. Poor matrix spike recoveries for Nitrite are attributed to matrix interference.

Affected Samples:
F1H230464 (1): A03MW607D001
F1H230464 (2): A03MW703DD0001
F1H230464 (3): A03MW16D0001
F1H230464 (4): A02MW40001
F1H230464 (5): A03MW9004
F1H230464 (6): A04AMW701DD0001
F1H230464 (7): A04BMW707DD0001

Nitrite (MCAWW 300.0A)

Batch: 1235172
The following samples were reported ND at dilution, due to high concentrations of interfering anions, which masked the retention times of these target analytes in the undiluted analyses. The reporting limit has been adjusted only for those targets reported from the dilution run.

The anion matrix spike solution contains all routine anions. Spiking technique, sample preparation and method compliance is demonstrated by the remaining acceptable MS recoveries. Poor matrix spike recoveries for Nitrite are attributed to matrix interference.

Affected Samples:
F1H230464 (1): A03MW607D001
F1H230464 (2): A03MW703DD0001
F1H230464 (3): A03MW16D0001
F1H230464 (4): A02MW40001
F1H230464 (5): A03MW9004
F1H230464 (6): A04AMW701DD0001
F1H230464 (7): A04BMW707DD0001

Fiterable Resiue (TDS) (MCAWW 160.1)

Batch: 1236026
The sample was analyzed at a dilution based on high concentrations of target analytes. The reporting limit has been adjusted accordingly.

Affected Samples:
F1H230464 (7): A04BMW707DD0001

There were no other nonconformances or observations noted with any analysis on this lot.

Manual Integration:
Manual integration may have been preformed for certain analysis and/or samples. Raw sample data can be supplied upon request detailing the manual integration and reasons why.

Certification Statement:
I certify that this image, and all data packages produced from this image, accurately represent the data and is in compliance with the SAP requirements, both technically and for completeness, other than the conditions detailed above or in the sample data package case narrative. The data, contained in this electronic image and computer-readable EDD, have been authorized by the lab manager, or the manager's designee.

METHODS SUMMARY

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Case Narrative
LOT NUMBER: F1H240450

This report contains the analytical results for the eight samples received under chain of custody by TestAmerica in St. Louis on August 24, 2011. These samples are associated with your Guterl Steel project.

The analytical results included in this report meet all applicable quality control procedure requirements except as noted on the following page.

The test results in this report meet all DoD QSM 4.1 requirements for which accreditations are held by TestAmerica in St. Louis except as permitted or accepted by the client and/or site specific documentation. In addition, the test results in this report meet all NELAP requirements for parameters in which accreditations are held by TestAmerica in St. Louis. **TestAmerica St. Louis' Florida certification number is E87689.** Any exceptions to NELAP requirements are noted in the case narrative. The case narrative is an integral part of this report.

All chemical analysis results are based upon sample as received, wet weight, unless noted otherwise. All radiochemistry results are based upon sample as dried and ground with the exception of tritium and carbon-14, unless requested wet weight by the client.

Observations/Nonconformances
The coolers were received from 2-6° C. No observations or non-conformances were noted at the time of receipt.

Volatile Organics by GC/MS (SW-846 8260)

Batch: 1243089
Acetonitrile and Tetrahydrofuran were removed from the initial calibration lowest point due to poor response. Addtionally, Acetone, Methyl acetate, n-Butanol and 1,4-Dioxane were removed from the lowest 2 points.

Isobutanol was removed from the initial calibration highest point due to elevated response. Additionally, the surrogate compounds (Dibromofluoromethane, 1,2-Dichloroethane-d4, Toluene-d8 and 4-Bromofluorobenzene) were not spiked at the initial calibration highest point because the recoveries do not warrant the high concentration.

The initial calibration still meets the minimum number of points and the reporting limits required. The compounds were removed within TestAmerica's selection of points policy.

The mininium RRF for 1,1,2,2-Tetrachloroethane is below the QC limit.

The CCV recovery was outside the upper QC limit (greater than 20% D) for Bromomethane, Trichlorofluoromethane and Chloroethane indicating a potential high bias for those analytes in the samples associated with this CCV. Bromomethane and Trichlorofluoromethane were not detected above the reporting limit and so this excursion does not affect the results. Chloroethane was detected above the reporting limit in samples F1H240450-001 and 003. Sample F1H240450-003 will be re-analyzed.

The LCS recovery for Bromomethane is outside the upper QC limit, indicating a potential positive bias for that analyte. This analyte was not observed above the reporting limit in the associated samples; therefore the sample data was not adversely affected by this excursion.

Affected Samples:
F1H240450 (1): A02MW9005
F1H240450 (3): A02MW020001
F1H240450 (5): TRIP BLANK#6

Batch: 1244139
The CCV %D for 1,4-Dioxane, 2-Hexanone, Cyclohexanone and n-Butylbenzene is outside the established QC limits. The analytes are not part of the -re-analysis request and thus this excursion does not affect the data.

There was insufficient sample volume to perform an MS/MSD analysis. An LCS/LCSD was performed to demonstrate accuracy and replicate precision.

The sample and method blank surrogate recovery is outside established QC limits. The sample target analyte (Chloroethane) is not associated with this surrogate excursion.

Affected Samples:
F1H240450 (3): A02MW020001

ICP-MS (SW846-6020)

Batch: 1237036
The samples were analyzed at a dilution due to high concentrations of target and interfering analytes causing internal standard and QC failures when run at a lesser dilution. The reporting limit has been adjusted for the dilution.

Affected Samples:
F1H240450 (4): A04BMW707DD0001

Inductively Coupled Plasma (ICP) Metals (SW-846 6010)

Batch: 1237037
The MS and MSD recovery for calcium is outside the established QC limits. The said analyte concentration in the original sample is greater than four times the amount spiked, making percent recovery information ineffective. Method performance is demonstrated by acceptable LCS recovery.

The concentration of strontium in the CCB is greater than 3 times the MDL. The samples associated with this CCB exhibit concentrations greater than ten times the concentrations observed in the CCB.

The samples were analyzed at a dilution due to high concentrations of target and interfering analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H240450 (1): A02MW9005
F1H240450 (2): A02MW010001
F1H240450 (3): A02MW020001
F1H240450 (6): A02MW9005 DISSOLVED
F1H240450 (7): A02MW010001 DISSOLVED
F1H240450 (8): A02MW020001 DISSOLVED

Chloride (MCAWW 300.0A)

Batch: 1236153
The following samples were analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H240450 (1): A02MW9005
F1H240450 (2): A02MW010001
F1H240450 (3): A02MW020001

Sulfate (MCAWW 300.0A)

Batch: 1236158
The following samples were analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H240450 (1): A02MW9005
F1H240450 (2): A02MW010001
F1H240450 (3): A02MW020001

Fluoride (MCAWW 300.0A)

Batch: 1236154
The following samples were analyzed at dilution, due to high concentrations of the target analytes. The reporting limit has been adjusted only for those targets reported from the dilution run.

Affected Samples:
F1H240450 (1): A02MW9005
F1H240450 (2): A02MW010001

Nitrite (MCAWW 300.0A)

Batch: 1236156
The following samples were reported ND at dilution for Nitrite, due to high concentrations of Chloride, which masked the Nitrite retention time in the undiluted analyses. The reporting limit has been adjusted only for those targets reported from the dilution run.

The anion matrix spike solution contains all routine anions. Spiking technique, sample preparation and method compliance is demonstrated by the remaining acceptable MS recoveries. Poor matrix spike recoveries for Nitrate are attributed to matrix interference.

The closing CCV recovery was outside the upper QC limit (110.85%), indicating a potential high bias for Nitrite in the samples associated with this CCV (F1H240450-001 & 003). However, Nitrite was not detected above the reporting limit in the associated samples.

Affected Samples:
F1H240450 (1): A02MW9005
F1H240450 (2): A02MW010001
F1H240450 (3): A02MW020001

Orthophosphate as P (MCAWW300.0A)

Batch: 1236157
The anion matrix spike solution contains all routine anions. Spiking technique, sample preparation and method compliance is demonstrated by the remaining acceptable MS recoveries. Poor matrix spike recoveries for Nitrate are attributed to matrix interference.

Affected Samples:
F1H240450 (1): A02MW9005
F1H240450 (2): A02MW010001
F1H240450 (3): A02MW020001

Manual Integration:
Manual integration may have been preformed for certain analysis and/or samples. Raw sample data can be supplied upon request detailing the manual integration and reasons why.

Certification Statement:
I certify that this image, and all data packages produced from this image, accurately represent the data and is in compliance with the SAP requirements, both technically and for completeness, other than the conditions detailed above or in the sample data package case narrative. The data, contained in this electronic image and computer-readable EDD, have been authorized by the lab manager, or the manager's designee.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Lot #(s): F1H240450

CUR Form #: 2 0 5

CONDITION UPON RECEIPT FORM

Client: SHAW

Quote No: 89251

COC/RFA No: 014

Initiated By: NVD Date: 8/24/11 Time: 0920

Shipping Information

Shipper: (FedEx) UPS DHL Courier Client Other: _____ Multiple Packages: (Y) N

Shipping # (s):*						Sample Temperature (s):**					
1.	4485	0258	4958	6.		1.	3		6.		
2.	↓	↓	4969	7.		2.	ABSENT		7.		
3.				8.		3.			8.		
4.				9.		4.			9.		
5.				10.		5.			10.		

*Numbered shipping lines correspond to Numbered Sample Temp lines

**Sample must be received at 4°C ± 2°C- If not, note contents below. Temperature variance does NOT affect the following: Metals-Liquid; Rad tests- Liquid or Solids; Perchlorate

Condition (Circle "Y" for yes, "N" for no and "N/A" for not applicable):

1.	(Y) N	Are there custody seals present on the cooler?	8.	Y (N)	Are there custody seals present on bottles?
2.	Y (N) N/A	Do custody seals on cooler appear to be tampered with?	9.	Y N (N/A)	Do custody seals on bottles appear to be tampered with?
3.	(Y) N	Were contents of cooler frisked after opening, but before unpacking?	10.	Y (N) N/A	Was sample received with proper pH[1]? (If not, make note below)
4.	(Y) N	Sample received with Chain of Custody?	11.	Y N (N/A)	Containers for C-14, H-3 & I-129/131 marked with "Do Not Preserve" label?
5.	(Y) N N/A	Does the Chain of Custody match sample ID's on the container(s)?	12.	(Y) N	Sample received in proper containers?
6.	Y (N)	Was sample received broken?	13.	Y (N) N/A	Headspace in VOA or TOX liquid samples? (If Yes, note sample ID's below)
7.	(Y) N	Is sample volume sufficient for analysis?	14.	Y N (N/A)	Was Internal COC/Workshare received?

[1] For DOE-AL (Pantex, LANL, Sandia) sites, pH of ALL containers received must be verified, EXCEPT VOA, TOX, Oil & Grease and soils.

Notes:

SAMPLE ID 404BMW'707DD0001 WAS REC'D WITH IMPROPER PH WHICH WAS CORRECTED BY ADDING NITRIC LOT #K11059 WHICH WAS OK'D BY P.M (LF)

Corrective Action:

☐ Client Contact Name: _____ Informed by: _____

☐ Sample(s) processed "as is"

☐ Sample(s) on hold until: _____ If released, notify: _____

Project Management Review: _____ Date: 8/24/11

THIS FORM MUST BE COMPLETED AT THE TIME THE ITEMS ARE BEING CHECKED IN. IF ANY ITEM IS COMPLETED BY SOMEONE OTHER THAN THE INITIATOR, THEN THAT PERSON IS REQUIRED TO APPLY THEIR INITIAL AND THE DATE NEXT TO THAT ITEM.

Case Narrative
LOT NUMBER: F1I010435

This report contains the analytical results for the five samples received under chain of custody by TestAmerica in St. Louis on September 1, 2011. These samples are associated with your Guterl Steel project.

The analytical results included in this report meet all applicable quality control procedure requirements except as noted on the following page.

The test results in this report meet all DoD QSM 4.1 requirements for which accreditations are held by TestAmerica in St. Louis except as permitted or accepted by the client and/or site specific documentation. In addition, the test results in this report meet all NELAP requirements for parameters in which accreditations are held by TestAmerica in St. Louis. **TestAmerica St. Louis' Florida certification number is E87689.** Any exceptions to NELAP requirements are noted in the case narrative. The case narrative is an integral part of this report.

All chemical analysis results are based upon sample as received, wet weight, unless noted otherwise. All radiochemistry results are based upon sample as dried and ground with the exception of tritium and carbon-14, unless requested wet weight by the client.

Observations/Nonconformances
Reference the chain of custody and condition upon receipt report for any variations on receipt conditions and temperature of samples on receipt.

Volatile Organics by GC/MS (SW-846 8260)

Batch: 1255150
The CCV %Ds for Ethyl acetate and Nonanal are outside the established QC limits. These analytes are not part of the analysis request and thus this excursion does not affect the data.

The LCS recovery for Bromoform is outside the upper QC limit, indicating a potential positive bias for these analytes. These analytes were not observed above the reporting limit or are not targets for the associated samples; therefore the sample data was not adversely affected by this excursion.

Affected Samples:
F1I010435 (1): AQUEOUS IDW
F1I010435 (5): TRIP BLANK #7

Volatile Organics by GC/MS (SW-846 8260)-TCLP

Batch: 1251207
The CCV recovery was outside the upper QC limit (greater than 20% D) for Vinyl chloride indicating a potential high bias for this analyte in the samples associated with this CCV. This analyte was not detected above the reporting limit in the associated samples.

Affected Samples:
F1I010435 (2): NON-AQUEOUS IDW

Mercury in Solid Waste (Manual Cold-Vapor) (SW846 7471)-TCLP

Batch: 1256029
The MS (MSD) recovery for mercury is outside the established QC limits. The RPD is within method acceptance criteria indicating matrix interference. Method performance is demonstrated by acceptable LCS recovery.

Affected Samples:
F1I010435 (2): NON-AQUEOUS IDW

ICP-MS (SW846-6020)

Batch: 1249123
The sample was analyzed at a dilution due to the presence of matrix interferences. The digestates were cloudy. The reporting limit has been adjusted for the dilution.

Affected Samples:
F1I010435 (3): A04BMW707DD0001
F1I010435 (4): A04BMW707DD0001 DISSOLVED

Inductively Coupled Plasma (ICP) Metals (SW-846 6010)

Batch: 1249124
The MSD recovery for sodium is outside the established QC limits. The said analyte concentration in the original sample is greater than four times the amount spiked, making percent recovery information ineffective. Method performance is demonstrated by acceptable LCS recovery.

The samples were analyzed at a dilution due to high concentrations of target and interfering analytes. The reporting limit has been adjusted for the dilution.

The serial dilution for calcium, sodium and strontium are outside the established QC limits, indicating matrix interference.

Affected Samples:
F1I010435 (1): AQUEOUS IDW
F1I010435 (3): A04BMW707DD0001
F1I010435 (4): A04BMW707DD0001 DISSOLVED

Inductively Coupled Plasma (ICP) Metals (SW-846 6010)-TCLP

Batch: 1249119
The CCV recovery was outside the upper QC limit (greater than 110%) for silver indicating a potential high bias for those analytes in the samples associated with this CCV. These analytes were not detected above the reporting limit in the associated samples or were not target analytes for the associated samples.

Affected Samples:
F1I010435 (2): NON-AQUEOUS IDW

Manual Integration:
Manual integration may have been preformed for certain analysis and/or samples. Raw sample data can be supplied upon request detailing the manual integration and reasons why.

Certification Statement:
I certify that this image, and all data packages produced from this image, accurately represent the data and is in compliance with the SAP requirements, both technically and for completeness, other than the conditions detailed above or in the sample data package case narrative. The data, contained in this electronic image and computer-readable EDD, have been authorized by the lab manager, or the manager's designee.

METHODS SUMMARY

F1I010435

PARAMETER	ANALYTICAL METHOD	PREPARATION METHOD
Inductively Coupled Plasma (ICP) Metals	SW846 6010B	SW846 1311/3010

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

*Numbered shipping lines correspond to Numbered Sample Temp lines

**Sample must be received at 4°C ± 2°C- If not, note contents below. Temperature variance does NOT affect the following: Metals-Liquid; Rad tests- Liquid or Solids; Perchlorate

Condition (Circle "Y" for yes, "N" for no and "N/A" for not applicable):

1.	(Y) N	Are there custody seals present on the cooler?	8.	Y (N)	Are there custody seals present on bottles?
2.	Y (N) N/A	Do custody seals on cooler appear to be tampered with?	9.	Y N (N/A)	Do custody seals on bottles appear to be tampered with?
3.	(Y) N	Were contents of cooler frisked after opening, but before unpacking?	10.	(Y) N N/A	Was sample received with proper pH[1]? (If not, make note below)
4.	(Y) N	Sample received with Chain of Custody?	11.	Y N (N/A)	Containers for C-14, H-3 & I-129/131 marked with "Do Not Preserve" label?
5.	(Y) N N/A	Does the Chain of Custody match sample ID's on the container(s)?	12.	(Y) N	Sample received in proper containers?
6.	Y (N)	Was sample received broken?	13.	Y (N) N/A	Headspace in VOA or TOX liquid samples? (If Yes, note sample ID's below)
7.	(Y) N	Is sample volume sufficient for analysis?	14.	Y N (N/A)	Was Internal COC/Workshare received?

[1] For DOE-AL (Pantex, LANL, Sandia) sites, pH of ALL containers received must be verified, EXCEPT VOA, TOX, Oil & Grease and soils.

Notes:

1048MW707DD0001 sample bottle only has total metals for analysis. Log total uranium per COC & CF

Corrective Action:

☐ Client Contact Name: _____ Informed by: _____

☐ Sample(s) processed "as is"

☐ Sample(s) on hold until: _____ If released, notify: _____

Project Management Review: _____ Date: 9/2/11

THIS FORM MUST BE COMPLETED AT THE TIME THE ITEMS ARE BEING CHECKED IN. IF ANY ITEM IS COMPLETED BY SOMEONE OTHER THAN THE INITIATOR, THEN THAT PERSON IS REQUIRED TO APPLY THEIR INITIAL AND THE DATE NEXT TO THAT ITEM.

Case Narrative
LOT NUMBER: F2B010413

This report contains the analytical results for the eight samples received under chain of custody by TestAmerica in St. Louis on February 1, 2012. These samples are associated with your Guterl Steel project.

The analytical results included in this report meet all applicable quality control procedure requirements except as noted on the following page.

The test results in this report meet all DoD QSM 4.1 requirements for which accreditations are held by TestAmerica in St. Louis except as permitted or accepted by the client and/or site specific documentation. In addition, the test results in this report meet all NELAP requirements for parameters in which accreditations are held by TestAmerica in St. Louis. **TestAmerica St. Louis' Florida certification number is E87689.** Any exceptions to NELAP requirements are noted in the case narrative. The case narrative is an integral part of this report.

All chemical analysis results are based upon sample as received, wet weight, unless noted otherwise. All radiochemistry results are based upon sample as dried and ground with the exception of tritium and carbon-14, unless requested wet weight by the client.

Observations/Nonconformances
The coolers were received from 2-6° C. No observations or non-conformances were noted at the time of receipt.

Per client requirements in the Statement of Work, dilutions were not preformed unless otherwise stated.

Manual Integration:
Manual integration may have been preformed for certain analysis and/or samples. Raw sample data can be supplied upon request detailing the manual integration and reasons why.

Certification Statement:
I certify that this image, and all data packages produced from this image, accurately represent the data and is in compliance with the SAP requirements, both technically and for completeness, other than the conditions detailed above or in the sample data package case narrative. The data, contained in this electronic image and computer-readable EDD, have been authorized by the lab manager, or the manager's designee.

The following clean-up methods for Organic analyses may have been used on samples in this data set. Specific methods employed are documented on the batch extraction logs.

Method 3600C: Cleanup
Method 3620C: Florisil Cleanup
Method 3630C: Silica Gel Cleanup
Method 3640A: Gel-Permeation Cleanup
Method 3650B: Acid-Base Partition Cleanup
Method 3660B: Sulfur Cleanup
Method 3665A: Sulfuric Acid/Permanganate Cleanup

Isotopic Uranium by Alpha Spectroscopy (EML A-01-R MOD)

There was insufficient sample to analyze samples at requested volume of 1L and a reduced aliquot of 500mL was performed. There was also insufficient sample sent for sample F2B010413-08 to be weighed at 500mL and a reduced aliquot of 250mL was used. An LCS/LCSD was also performed.

Affected Samples:

F2B010413 (1): A04DMW710D0002 (DISSOLVED)
F2B010413 (2): A04DMW710DD0002 (DISSOLVED)
F2B010413 (3): A04DMW713D0002 (DISSOLVED)
F2B010413 (4): A04DMW708DD0002 (DISSOLVED)
F2B010413 (5): A04DMW710D0002
F2B010413 (6): A04DMW710DD0002
F2B010413 (7): A04DMW713D0002
F2B010413 (8): A04DMW708DD0002

The Uranium sample did not meet the CRDL due to a reduced sample volume. No further action is required and sample results will be reported for client review.

Affected Samples:

F2B010413 (8): A04DMW708DD0002

There were no other nonconformances or observations noted with any analysis on this lot.

MQH72	008	A04DMW708DD0002	01/30/12	14:50

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Case Narrative
LOT NUMBER: F2B030480

This report contains the analytical results for the 14 samples received under chain of custody by TestAmerica in St. Louis on February 3, 2012. These samples are associated with your Guterl Steel project.

The analytical results included in this report meet all applicable quality control procedure requirements except as noted on the following page.

The test results in this report meet all DoD QSM 4.1 requirements for which accreditations are held by TestAmerica in St. Louis except as permitted or accepted by the client and/or site specific documentation. In addition, the test results in this report meet all NELAP requirements for parameters in which accreditations are held by TestAmerica in St. Louis. **TestAmerica St. Louis' Florida certification number is E87689.** Any exceptions to NELAP requirements are noted in the case narrative. The case narrative is an integral part of this report.

All chemical analysis results are based upon sample as received, wet weight, unless noted otherwise. All radiochemistry results are based upon sample as dried and ground with the exception of tritium and carbon-14, unless requested wet weight by the client.

Observations/Nonconformances
The coolers were received from 2-6° C. No observations or non-conformances were noted at the time of receipt.

Per client requirements in the Statement of Work, dilutions were not preformed unless otherwise stated.

Manual Integration:
Manual integration may have been preformed for certain analysis and/or samples. Raw sample data can be supplied upon request detailing the manual integration and reasons why.

Certification Statement:
I certify that this image, and all data packages produced from this image, accurately represent the data and is in compliance with the SAP requirements, both technically and for completeness, other than the conditions detailed above or in the sample data package case narrative. The data, contained in this electronic image and computer-readable EDD, have been authorized by the lab manager, or the manager's designee.

The following clean-up methods for Organic analyses may have been used on samples in this data set. Specific methods employed are documented on the batch extraction logs.

Method 3600C: Cleanup
Method 3620C: Florisil Cleanup
Method 3630C: Silica Gel Cleanup
Method 3640A: Gel-Permeation Cleanup
Method 3650B: Acid-Base Partition Cleanup
Method 3660B: Sulfur Cleanup
Method 3665A: Sulfuric Acid/Permanganate Cleanup

Isotopic Uranium by Alpha Spectroscopy (EML A-01-R MOD)

There was insufficient sample provided to perform the analysis at the method specified amount. A reduced sample amount was prepared.

F2B030480 (14): A04DMW709DD0002 (DISSOLVED)

The Uranium sample did not meet the CRDL due to a reduced sample volume.

Affected Samples:
F2B030480 (3): A04BMW605D0002
F2B030480 (5): A04BMW9006
F2B030480 (10): A04BMW605D0002 (DISSOLVED)
F2B030480 (12): A04BMW9006 (DISSOLVED)

The serial dilution percent difference is not within QC limits for uranium.

Affected Samples:
F2B030480 (1): A04BMW260002
F2B030480 (2): A04BMW707DD0002
F2B030480 (3): A04BMW605D0002
F2B030480 (4): A04DMW704DD0002
F2B030480 (5): A04BMW9006
F2B030480 (6): A04DMW604D0002

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

5.	10.	5.	10.

*Numbered shipping lines correspond to Numbered Sample Temp lines

**Sample must be received at 4°C ± 2°C- If not, note contents below. Temperature variance does NOT affect the following: Metals-Liquid; Rad tests- Liquid or Solids; Perchlorate

Condition (Circle "Y" for yes, "N" for no and "N/A" for not applicable):

1.	(Y) N	Are there custody seals present on the cooler?	8.	Y (N)	Are there custody seals present on bottles?
2.	Y (N) N/A	Do custody seals on cooler appear to be tampered with?	9.	Y N (N/A)	Do custody seals on bottles appear to be tampered with?
3.	(Y) N	Were contents of cooler frisked after opening, but before unpacking?	10.	(Y) N N/A	Was sample received with proper pH[1]? (If not, make note below)
4.	(Y) N	Sample received with Chain of Custody?	11.	Y N (N/A)	Containers for C-14, H-3 & I-129/131 marked with "Do Not Preserve" label?
5.	(Y) N N/A	Does the Chain of Custody match sample ID's on the container(s)?	12.	(Y) N	Sample reeeived in proper containers?
6.	Y (N)	Was sample received broken?	13.	Y N (N/A)	Headspace in VOA or TOX liquid samples? (If Yes, note sample ID's below)
7.	(Y) N	Is sample volume sufficient for analysis?	14.	Y N (N/A)	Was Internal COC/Workshare received?

[1] For DOE-AL (Pantex, LANL, Sandia) sites, pH of ALL containers received must be verified, EXCEPT VOA, TOX, Oil & Grease and soils.

Case Narrative
LOT NUMBER: F2E080406

This report contains the analytical results for the 22 samples received under chain of custody by TestAmerica in St. Louis on May 7, 2012. These samples are associated with your Guterl Steel project.

The analytical results included in this report meet all applicable quality control procedure requirements except as noted on the following page.

The test results in this report meet all DoD QSM 4.2 requirements for which accreditations are held by TestAmerica in St. Louis except as permitted or accepted by the client and/or site specific documentation. In addition, the test results in this report meet all NELAP requirements for parameters in which accreditations are held by TestAmerica in St. Louis. **TestAmerica St. Louis' Florida certification number is E87689.** Any exceptions to NELAP requirements are noted in the case narrative. The case narrative is an integral part of this report.

All chemical analysis results are based upon sample as received, wet weight, unless noted otherwise. All radiochemistry results are based upon sample as dried and ground with the exception of tritium and carbon-14, unless requested wet weight by the client.

Observations/Nonconformances
The coolers were received at ambient temperature. No observations or non-conformances were noted at the time of receipt.

Per client requirements in the Statement of Work, dilutions were not preformed unless otherwise stated.

Manual Integration:
Manual integration may have been preformed for certain analysis and/or samples. Raw sample data can be supplied upon request detailing the manual integration and reasons why.

Certification Statement:
I certify that this image, and all data packages produced from this image, accurately represent the data and is in compliance with the SAP requirements, both technically and for completeness, other than the conditions detailed above or in the sample data package case narrative. The data, contained in this electronic image and computer-readable EDD, have been authorized by the lab manager, or the manager's designee.

The following clean-up methods for Organic analyses may have been used on samples in this data set. Specific methods employed are documented on the batch extraction logs.

Method 3600C: Cleanup
Method 3620C: Florisil Cleanup
Method 3630C: Silica Gel Cleanup
Method 3640A: Gel-Permeation Cleanup
Method 3650B: Acid-Base Partition Cleanup
Method 3660B: Sulfur Cleanup
Method 3665A: Sulfuric Acid/Permanganate Cleanup

Isotopic Uranium by Alpha Spectroscopy (EML A-01-R MOD)

Batch: 2130026
There was insufficient sample to perform the analysis at 1000mL. The sample aliquots were reduced to 500mL.
Affected Samples:
F2E080406 (1): A04DMW710D0003
F2E080406 (2): A04DMW710DD0003
F2E080406 (3): A04DMW713D0003
F2E080406 (4): A04DMW708DD0003
F2E080406 (5): DUP-01
F2E080406 (6): A04BMW605D0003
F2E080406 (7): A04BMW704DD0003
F2E080406 (8): A04BMW707DD0003
F2E080406 (9): A04BMW260003
F2E080406 (10): A04DMW604D0003
F2E080406 (11): A04DMW709DD0003
F2E080406 (12): A04DMW710D0003
F2E080406 (13): A04DMW710DD0003
F2E080406 (14): A04DMW713D0003
F2E080406 (15): A04DMW708DD0003
F2E080406 (16): DUP-01
F2E080406 (17): A04BMW605D0003

Batch: 2130026
The associated Uranium samples did not meet the client requested reporting limit due to the presence of the nuclide in the sample and the reduced sample volume.
Affected Samples:
F2E080406 (5): DUP-01
F2E080406 (6): A04BMW605D0003
F2E080406 (9): A04BMW260003
F2E080406 (16): DUP-01
F2E080406 (17): A04BMW605D0003

Batch: 2130027
There was insufficient sample to perform the analysis at 1000mL. The sample aliquots were reduced to 500mL. The reduction in sample size had no effect on the sample results.
Affected Samples:
F2E080406 (18): A04BMW704DD0003
F2E080406 (19): A04BMW707DD0003
F2E080406 (20): A04BMW260003
F2E080406 (21): A04DMW604D0003
F2E080406 (22): A04DMW709DD0003

There were no other nonconformances or observations noted with any analysis on this lot.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Quote No: 89251

COC/RFA No: 191675

Initiated By: bm Date: 5/7/12 Time: 0920

Shipping Information

Shipper: (FedEx) UPS DHL Courier Client Other: _____ Multiple Packages: (Y) N

Shipping # (s):*				Sample Temperature (s):**			
1.	4485 0261 0812	6.		1.	Ambient	6.	
2.	↓ 0823	7.		2.	↓	7.	
3.		8.		3.		8.	
4.		9.		4.		9.	
5.		10.		5.		10.	

*Numbered shipping lines correspond to Numbered Sample Temp lines

**Sample must be received at 4°C ± 2°C- If not, note contents below. Temperature variance does NOT affect the following: Metals-Liquid; Rad tests- Liquid or Solids; Perchlorate

Condition (Circle "Y" for yes, "N" for no and "N/A" for not applicable):

1.	(Y) N	Are there custody seals present on the cooler?	8.	Y (N)	Are there custody seals present on bottles?
2.	Y (N) N/A	Do custody seals on cooler appear to be tampered with?	9.	Y N (N/A)	Do custody seals on bottles appear to be tampered with?
3.	(Y) N	Were contents of cooler frisked after opening, but before unpacking?	10.	(Y) N N/A	Was sample received with proper pH[1]? (If not, make note below)
4.	(Y) N	Sample received with Chain of Custody?	11.	Y N (N/A)	Containers for C-14, H-3 & I-129/131 marked with "Do Not Preserve" label?
5.	(Y) N N/A	Does the Chain of Custody match sample ID's on the container(s)?	12.	(Y) N	Sample received in proper containers?
6.	Y (N)	Was sample received broken?	13.	Y N (N/A)	Headspace in VOA or TOX liquid samples? (If Yes, note sample ID's below)
7.	(Y) N	Is sample volume sufficient for analysis?	14.	Y N (N/A)	Was Internal COC/Workshare received?

[1] For DOE-AL (Pantex, LANL, Sandia) sites, pH of ALL containers received must be verified, EXCEPT VOA, TOX, Oil & Grease and soils.

Notes:

Corrective Action:

Case Narrative
LOT NUMBER: F2E090426-

This report contains the analytical results for the 10 samples received under chain of custody by TestAmerica in St. Louis on May 8, 2012. These samples are associated with your Guterl Steel project.

The analytical results included in this report meet all applicable quality control procedure requirements except as noted on the following page.

The test results in this report meet all DoD QSM 4.2 requirements for which accreditations are held by TestAmerica in St. Louis except as permitted or accepted by the client and/or site specific documentation. In addition, the test results iu this report meet all NELAP requirements for parameters in which accreditations are held by TestAmerica in St. Louis. **TestAmerica St. Louis' Florida certification number is E87689.** Any exceptions to NELAP requirements are noted in the case narrative. The case narrative is an integral part of this report.

All chemical analysis results are based upon sample as received, wet weight, unless noted otherwise. All radiochemistry results are based upon sample as dried and ground with the exception of tritium and carbon-14, unless requested wet weight by the client.

Observations/Nonconformances
Reference the chain of custody and condition upon receipt report for any variations on receipt conditions and temperature of samples on receipt.

Certification Statement:
I certify that this image, and all data packages produced from this image, accurately represent the data and is in compliance with the SAP requirements, both technically and for completeness, other than the conditions detailed above or in the sample data package case narrative. The data, contained in this electronic image and computer-readable EDD, have been authorized by the lab manager, or the manager's designee.

The following clean-up methods for Organic analyses may have been used on samples in this data set. Specific methods employed are documented on the batch extraction logs.

Method 3600C: Cleanup
Method 3620C: Florisil Cleanup
Method 3630C: Silica Gel Cleanup
Method 3640A: Gel-Permeation Cleanup
Method 3650B: Acid-Base Partition Cleanup
Method 3660B: Sulfur Cleanup
Method 3665A: Sulfuric Acid/Permanganate Cleanup

Mercury in Liquid Waste (Manual Cold Vapor) (SW846 7470)
Additional Potassium Permanganate in the amount of 4.5mL was added to all samples and QC due to the permanganate color not persisting for 15 min.

Affected Samples:
F2E090426 (1): GUTERL STEEL SEEP (1)
F2E090426 (2): GUTERL STEEL SEEP (1) (F)
F2E090426 (3): GUTERL STEEL SEEP (2)
F2E090426 (4): GUTERL STEEL SEEP (2) (F)
F2E090426 (5): GUTERL STEEL SEEP (3)
F2E090426 (6): GUTERL STEEL SEEP (3) (F)
F2E090426 (7): GUTERL SURFACE (1)
F2E090426 (8): GUTERL SURFACE (1) (F)
F2E090426 (9): GUTERL SURFACE (2)
F2E090426 (10): GUTERL SURFACE (2) (F)

Inductively Coupled Plasma (ICP) Metals (SW-846 6010)
The LLC recovery for thallium is outside the upper QC limit, indicating a potential positive bias for that analyte. This analyte was non-detect, indicating that the samples were not affected by this excursion. The original sample results are provided.

The MS (MSD) recoveryfor calcium is outside the established QC limits. The said analyte concentration in the original sample is greater than four times the amount spiked, making percent recovery information ineffective. Method performance is demonstrated by acceptable LCS recovery. No further action is required.

The samples were analyzed at a dilution due to high concentrations of target and interfering analytes. The reporting limit has been adjusted for the dilution.

Affected Samples:
F2E090426 (1): GUTERL STEEL SEEP (1)
F2E090426 (2): GUTERL STEEL SEEP (1) (F)
F2E090426 (3): GUTERL STEEL SEEP (2)
F2E090426 (4): GUTERL STEEL SEEP (2) (F)
F2E090426 (5): GUTERL STEEL SEEP (3)
F2E090426 (6): GUTERL STEEL SEEP (3) (F)
F2E090426 (7): GUTERL SURFACE (1)
F2E090426 (8): GUTERL SURFACE (1) (F)
F2E090426 (9): GUTERL SURFACE (2)
F2E090426 (10): GUTERL SURFACE (2) (F)

Isotopic Uranium by Alpha Spectroscopy (EML A-01-R MOD)
There was insufficient sample to perform a sample duplicate. The sample aliquot was also reduced from 1000mL to 500mL.

Affected Samples:
F2E090426 (1): GUTERL STEEL SEEP (1)
F2E090426 (2): GUTERL STEEL SEEP (1) (F)
F2E090426 (3): GUTERL STEEL SEEP (2)
F2E090426 (4): GUTERL STEEL SEEP (2) (F)
F2E090426 (5): GUTERL STEEL SEEP (3)
F2E090426 (6): GUTERL STEEL SEEP (3) (F)
F2E090426 (7): GUTERL SURFACE (1)
F2E090426 (8): GUTERL SURFACE (1) (F)
F2E090426 (9): GUTERL SURFACE (2)
F2E090426 (10): GUTERL SURFACE (2) (F)

There were no other nonconformances or observations noted with any analysis on this lot.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

THE LEADER IN ENVIRONMENTAL TESTING

Lot #(s): 120090426 TestAmerica St. Louis

CUR Form #: 1 2 7

CONDITION UPON RECEIPT FORM

Client: Shaw

Quote No: 89251

COC/RFA No: 192759

Initiated By: BH Date: 5/8/12 Time: 0915

Shipping Information

Shipper: (FedEx) UPS DHL Courier Client Other: _____ Multiple Packages: (Y) N

Shipping # (s):*				Sample Temperature (s):**			
1.	4485 0261 0948	6.		1.	Ambient	6.	
2.		7.		2.		7.	
3.		8.		3.		8.	
4.		9.		4.		9.	
5.		10.		5.		10.	

*Numbered shipping lines correspond to Numbered Sample Temp lines

**Sample must be received at 4°C ± 2°C- If not, note contents below. Temperature variance does NOT affect the following: Metals-Liquid; Rad tests- Liquid or Solids; Perchlorate

Condition (Circle "Y" for yes, "N" for no and "N/A" for not applicable):

1.	(Y) N	Are there custody seals present on the cooler?	8.	Y (N)	Are there custody seals present on bottles?
2.	Y (N) N/A	Do custody seals on cooler appear to be tampered with?	9.	Y N (N/A)	Do custody seals on bottles appear to be tampered with?
3.	(Y) N	Were contents of cooler frisked after opening, but before unpacking?	10.	(Y) N N/A	Was sample received with proper pH[1]? (If not, make note below)
4.	(Y) N	Sample received with Chain of Custody?	11.	Y N (N/A)	Containers for C-14, H-3 & I-129/131 marked with "Do Not Preserve" label?
5.	(Y) N N/A	Does the Chain of Custody match sample ID's on the container(s)?	12.	(Y) N	Sample received in proper containers?
6.	Y (N)	Was sample received broken?	13.	Y N (N/A)	Headspace in VOA or TOX liquid samples? (If Yes, note sample ID's below)
7.	(Y) N	Is sample volume sufficient for analysis?	14.	Y N (N/A)	Was Internal COC/Workshare received?

[1] For DOE-AL (Pantex, LANL, Sandia) sites, pH of ALL containers received must be verified, EXCEPT VOA, TOX, Oil & Grease and soils.

Notes:

Corrective Action:

Case Narrative
LOT NUMBER: F2H090401
Revised

This report contains the analytical results for the 22 samples received under chain of custody by TestAmerica in St. Louis on August 8, 2012. These samples are associated with your Guterl Steel project.

The analytical results included in this report meet all applicable quality control procedure requirements except as noted on the following page.

The test results in this report meet all DoD QSM 4.2 requirements for which accreditations are held by TestAmerica in St. Louis except as permitted or accepted by the client and/or site specific documentation. In addition, the test results in this report meet all NELAP requirements for parameters in which accreditations are held by TestAmerica in St. Louis. **TestAmerica St. Louis' Florida certification number is E87689.** Any exceptions to NELAP requirements are noted in the case narrative. The case narrative is an integral part of this report.

All chemical analysis results are based upon sample as received, wet weight, unless noted otherwise. All radiochemistry results are based upon sample as dried and ground with the exception of tritium and carbon-14, unless requested wet weight by the client.

This report is revised to include Uranium 235/236 and Uranium 238 with the Isotopic Uranium by Alpha Spectroscopy (EML A-01-R MOD) analysis.

Observations/Nonconformances
Reference the chain of custody and condition upon receipt report for any variations on receipt conditions and temperature of samples on receipt.

Certification Statement:
I certify that this image, and all data packages produced from this image, accurately represent the data and is in compliance with the SAP requirements, both technically and for completeness, other than the conditions detailed above or in the sample data package case narrative. The data, contained in this electronic image and computer-readable EDD, have been authorized by the lab manager, or the manager's designee.

The following clean-up methods for Organic analyses may have been used on samples in this data set. Specific methods employed are documented on the batch extraction logs.

Method 3600C: Cleanup
Method 3620C: Florisil Cleanup
Method 3630C: Silica Gel Cleanup
Method 3640A: Gel-Permeation Cleanup
Method 3650B: Acid-Base Partition Cleanup
Method 3660B: Sulfur Cleanup
Method 3665A: Sulfuric Acid/Permanganate Cleanup

Isotopic Uranium by Alpha Spectroscopy (EML A-01-R MOD)

There sample aliquot was reduced due to insufficient sample. The aliquot for F2H090401-3 was reduced to 100mL due to high solid content in the sample.

The Uranium samples (F2H090401-015, -016, and -022) did not meet the CRDL due to the reduced sample volume. The sample results are acceptable and will be reported for client review.

The MS and MSD recovery is outside the established QC limits. The analyte concentration in the original sample is greater than 4 times the amount spiked, making % recovery information statistically invalid. Method performance is demonstrated by acceptable LCS recovery. Results are provided with this narrative.

The Uranium samples (F2H090401-003, -004 and -007) did not meet the CRDL due to the reduced sample volume. The sample results are acceptable and will be reported for client review.

Affected Samples:

F2H090401 (1): A04DMW713D0004
F2H090401 (2): A04DMW708DD0004
F2H090401 (3): A04BMW704DD0004

5. _____
6. _____
7. _____
8. _____
9. _____
10. _____

*Numbered shipping lines correspond to Numbered Sample Temp lines

**Sample must be received at 4°C ± 2°C- If not, note contents below. Temperature variance does NOT affect the following: Metals-Liquid; Rad tests- Liquid or Solids; Perchlorate

Condition (Circle "Y" for yes, "N" for no and "N/A" for not applicable):

1.	(Y) N	Are there custody seals present on the cooler?	8.	Y (N)	Are there custody seals present on bottles?
2.	Y (N) N/A	Do custody seals on cooler appear to be tampered with?	9.	Y N (N/A)	Do custody seals on bottles appear to be tampered with?
3.	(Y) N	Were contents of cooler frisked after opening, but before unpacking?	10.	(Y) N N/A	Was sample received with proper pH[1]? (If not, make note below)
4.	(Y) N	Sample received with Chain of Custody?	11.	Y N (N/A)	Containers for C-14, H-3 & I-129/131 marked with "Do Not Preserve" label?
5.	Y (N) N/A	Does the Chain of Custody match sample ID's on the container(s)?	12.	(Y) N	Sample received in proper containers?
6.	Y (N)	Was sample received broken?	13.	Y N (N/A)	Headspace in VOA or TOX liquid samples? (If Yes, note sample ID's below)
7.	(Y) N	Is sample volume sufficient for analysis?	14.	Y N (N/A)	Was Internal COC/Workshare received?

[1] For DOE-AL (Pantex, LANL, Sandia) sites, pH of ALL containers received must be verified, EXCEPT VOA, TOX, Oil & Grease and soils.

Notes:

604D004 on C-O-C is 6040004 on one bottle; an MS for that sample is labeled A04BMW004D0004 MS but date/time are the same.

Did not recv'd. A04BMW707DD0004 total 4 bottle ↓ ↓ 704 ↓ ↓ had pH of 7. Per LF preserved w/HNO3 lot K26024 to correct all bottles. also for 480-23448-1.

Corrective Action:

☐ Client Contact Name: _____ Informed by: _____

☐ Sample(s) processed "as is"

☐ Sample(s) on hold until: _____ If released, notify: _____

Project Management Review: [signature] Date: 8/13/12

THIS FORM MUST BE COMPLETED AT THE TIME THE ITEMS ARE BEING CHECKED IN. IF ANY ITEM IS COMPLETED BY SOMEONE OTHER THAN THE INITIATOR, THEN THAT PERSON IS REQUIRED TO APPLY THEIR INITIAL AND THE DATE NEXT TO THAT ITEM.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

: MV2RW1AD
Sample Collection Date: 8/6/2012 12:00:00AM

Spectrum #1 Analysis #1
Sample Volume : 0.5004L
Aliquot: N/A Aliquot Fraction: N/A

Batch

Batch Name: 2226015
AnalysisID: 535780

Analyst: 60040

Tracer

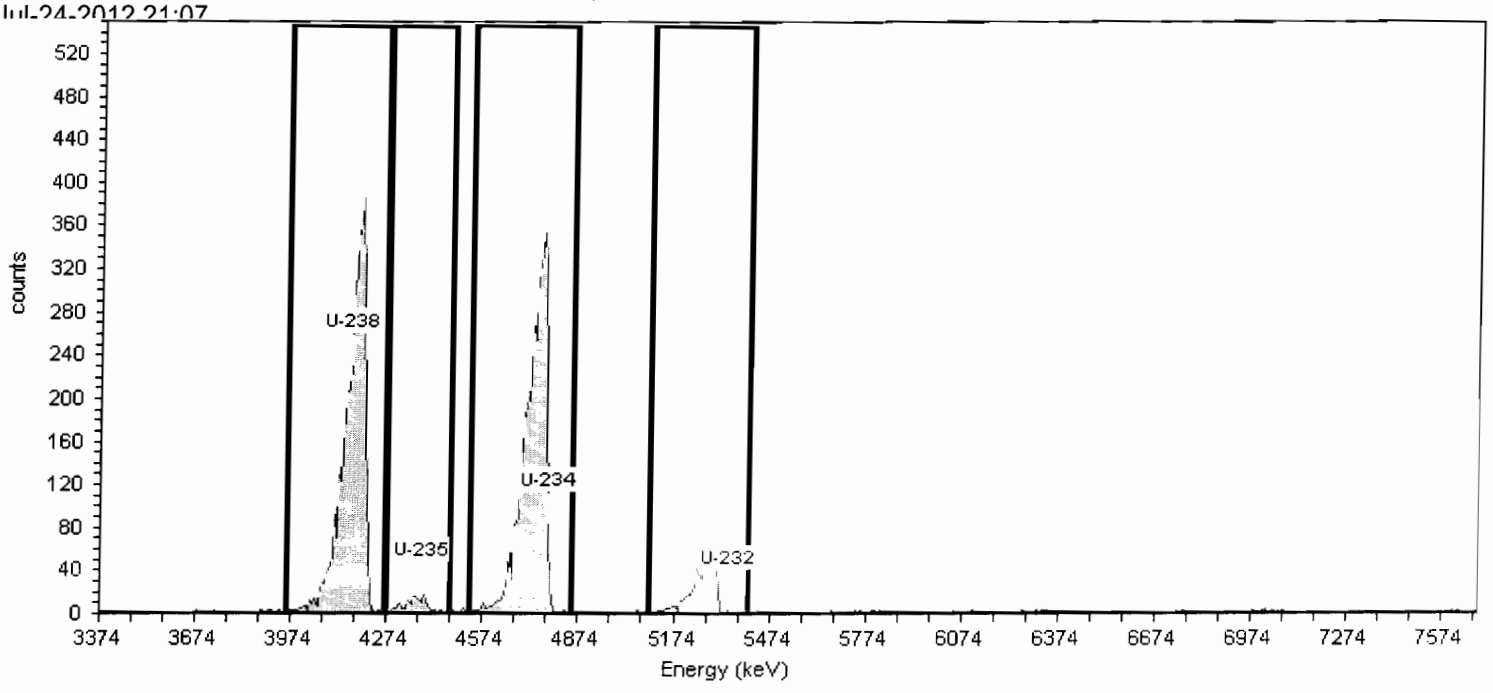
Tracer Name: Rad11-0087_U232_Unclean
Tracer Activity: 77.48 DPM/mL x (Vol.)0.10 mL = 7.75 DPM
Tracer Ref. Date: 4/7/2003 11:00:15AM

Tracer Nuclide: U-232
Tracer Recovery: 70.66%

Acquisition

Detector: AV71
Serial Number: 48-158EE6
Acquisition Start Date: 8/15/2012 11:44:23PM
Live Time: 400.00 min.
Real Time: 400.05 min.
Background Date: 7/24/2012 9:07:35PM
Background Info: Sample: ICB;AV71; Det: AV71; Spectrum #1;
Jul-24-2012 21:07

Calibration Name: IC-9792;AV71-20120610
Calibration Date: 6/11/2012 3:33:08PM
Energy Cal: Gain = 7.4575 keV / Ch
Offset = 3,366.95 keV
Quadratic = 0.0000 keV / Ch^2
Efficiency: 27.63% +/- 0.32% TPU(2 sigma)



General Analysis

Analysis Method: ROI Analysis, Set Name = UROI
Decay Correction: 8/15/2012 11:42:50PM
MDA Constants: Kα = 1.65 , Kβ = 1.65

Nuclide Library: Uranium
MDA Source: Background

Notes:
Detectors which do not appear on the AlphaVision Daily Pulser Check report were not used for the day.
OOS = Out of Service (detector failed two consecutive daily checks)
OK = After one initial failing check the detector passed according to laboratory or client specific requirements; therefore, the detector was placed into service (if "OK" is used for any other purpose, an explanation will be provided).

Sample Name: ICB;AV47
Comment:

Spectrum #1 Analysis #1

Batch

Batch Name: July2012b
Description:

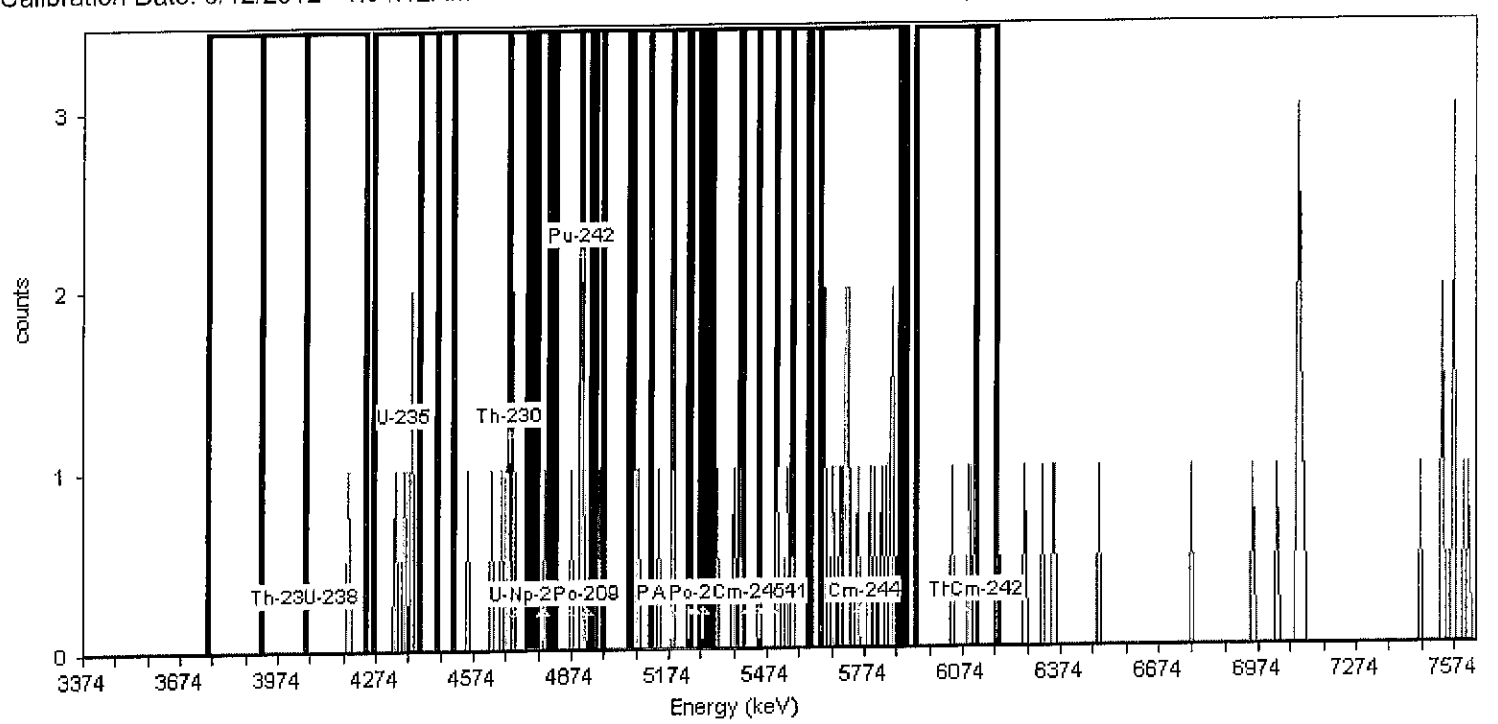
Analyst: 60040

Acquisition

Detector: AV47 , SN: 50-051C7
Acquisition Start Date: 7/24/2012 9:07:06PM
Live Time: 960.00 min.
Real Time: 960.01 min.
Calibration Name: IC-9885;AV47-20120611a
Calibration Date: 6/12/2012 1:04:12AM

Energy Calibration Equation:
Gain = 7.4575 keV / Ch
Offset = 3,366.95 keV
Quadratic = 0.0000 keV / Ch^2

Efficiency: 26.78% +/- 0.39% TPU(2 sigma)



General Analysis

Analysis Method: Absolute ROI Analysis, Set Name = 11/05_BackgroundROI
Nuclide Library: Background ROI Library
Total Background Counts: 74.00

Nuclide Summary (ROI)

Sample

Sample Name: ICB;AV50
Comment:

Spectrum #1 Analysis #1

Batch

Batch Name: July2012b
Description:

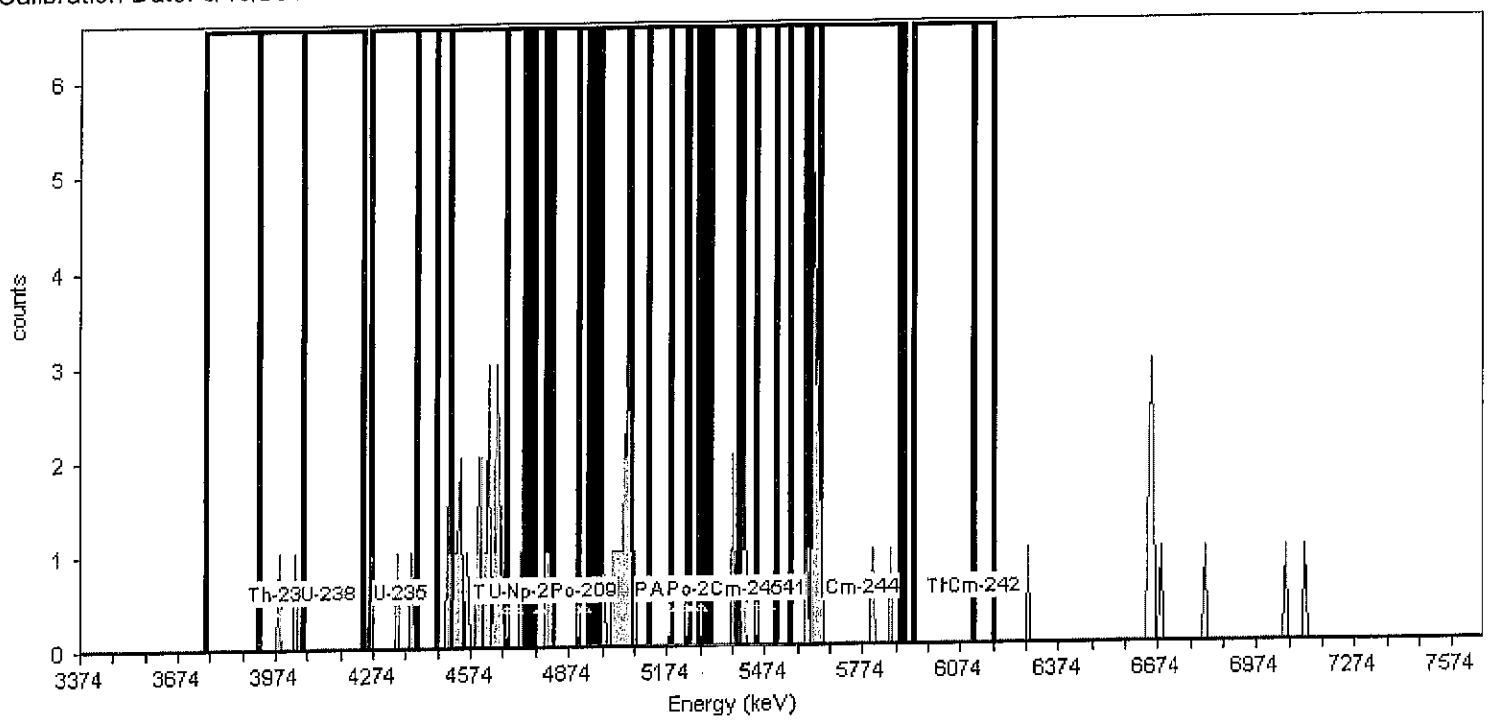
Analyst: 60040

Acquisition

Detector: AV50 , SN: 50-060W2
Acquisition Start Date: 7/24/2012 9:07:09PM
Live Time: 960.00 min.
Real Time: 960.01 min.
Calibration Name: IC-8874;AV50-20120610
Calibration Date: 6/10/2012 8:17:58PM

Energy Calibration Equation:
Gain = 7.4575 keV / Ch
Offset = 3,366.95 keV
Quadratic = 0.0000 keV / Ch^2

Efficiency: 27.54% +/- 0.39% TPU(2 sigma)



General Analysis

Analysis Method: Absolute ROI Analysis, Set Name = 11/05_BackgroundROI
Nuclide Library: Background ROI Library
Total Background Counts: 76.00

Spectrum #1 Analysis #1

Batch

Batch Name: July2012b
Description:

Analyst: 60040

Acquisition

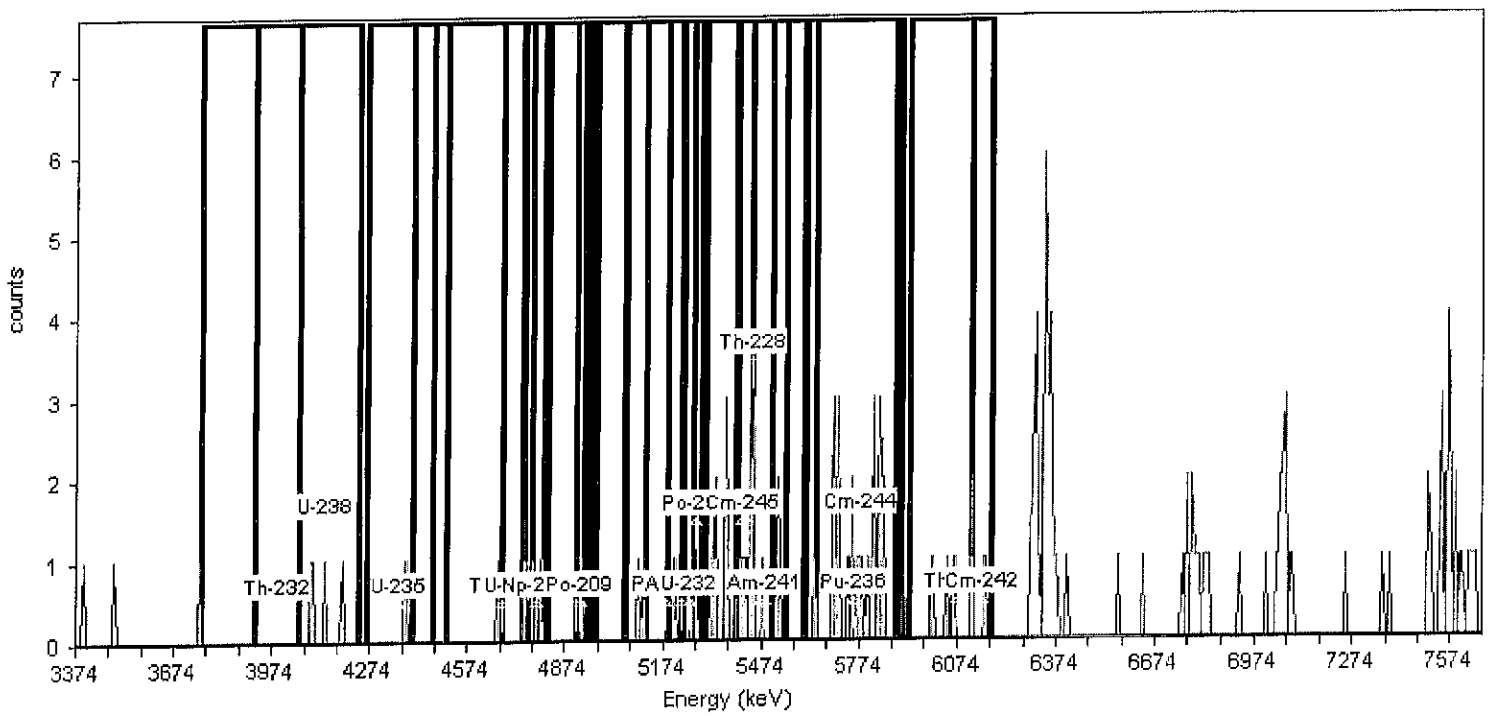
Detector: AV52 , SN:
Acquisition Start Date: 7/24/2012 9:07:11PM
Live Time: 960.00 min.
Real Time: 963.14 min.
Calibration Name: IC-8876;AV52-20120610
Calibration Date: 6/10/2012 8:18:26PM

Energy Calibration Equation:
Gain = 7.4575 keV / Ch
Offset = 3,366.95 keV
Quadratic = 0.0000 keV / Ch^2

Efficiency: 29.11% +/- 0.33% TPU(2 sigma)



General Analysis

Analysis Method: Absolute ROI Analysis, Set Name = 11/05_BackgroundROI
Nuclide Library: Background ROI Library
Total Background Counts: 155.00

Sample

Sample Name: ICB;AV59
Comment:

Spectrum #1 Analysis #1

Batch

Batch Name: July2012b
Description:

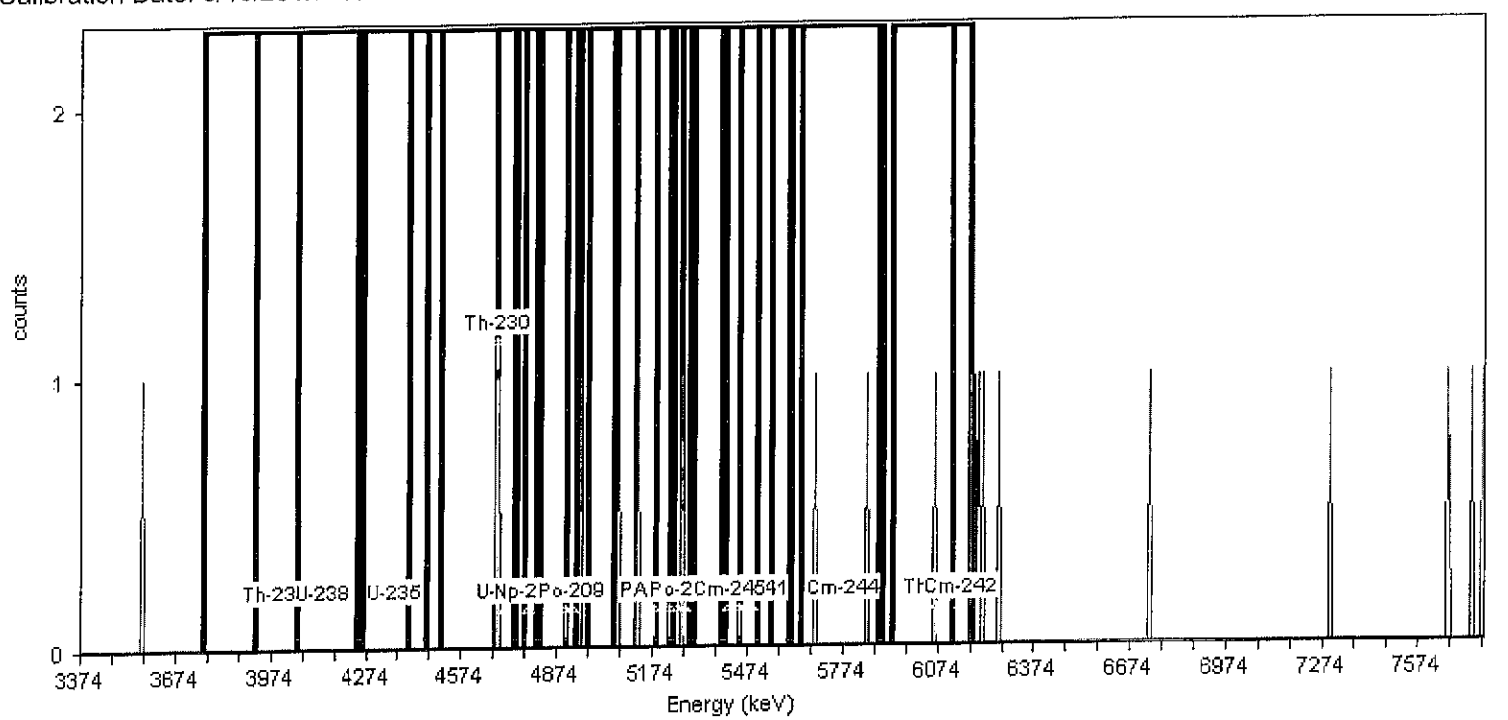
Analyst: 60040

Acquisition

Detector: AV59 , SN: 49-155M7
Acquisition Start Date: 7/24/2012 9:07:16PM
Live Time: 960.00 min.
Real Time: 960.01 min.
Calibration Name: IC-9795;AV59-20120610
Calibration Date: 6/10/2012 8:19:39PM

Energy Calibration Equation:
Gain = 7.4575 keV / Ch
Offset = 3,366.95 keV
Quadratic = 0.0000 keV / Ch^2

Efficiency: 27.53% +/- 0.36% TPU(2 sigma)



General Analysis

Analysis Method: Absolute ROI Analysis, Set Name = 11/05_BackgroundROI
Nuclide Library: Background ROI Library
Total Background Counts: 20.00

Sample Name: ICB;AV60
Comment:

Spectrum #1 Analysis #1

Batch

Batch Name: July2012b
Description:

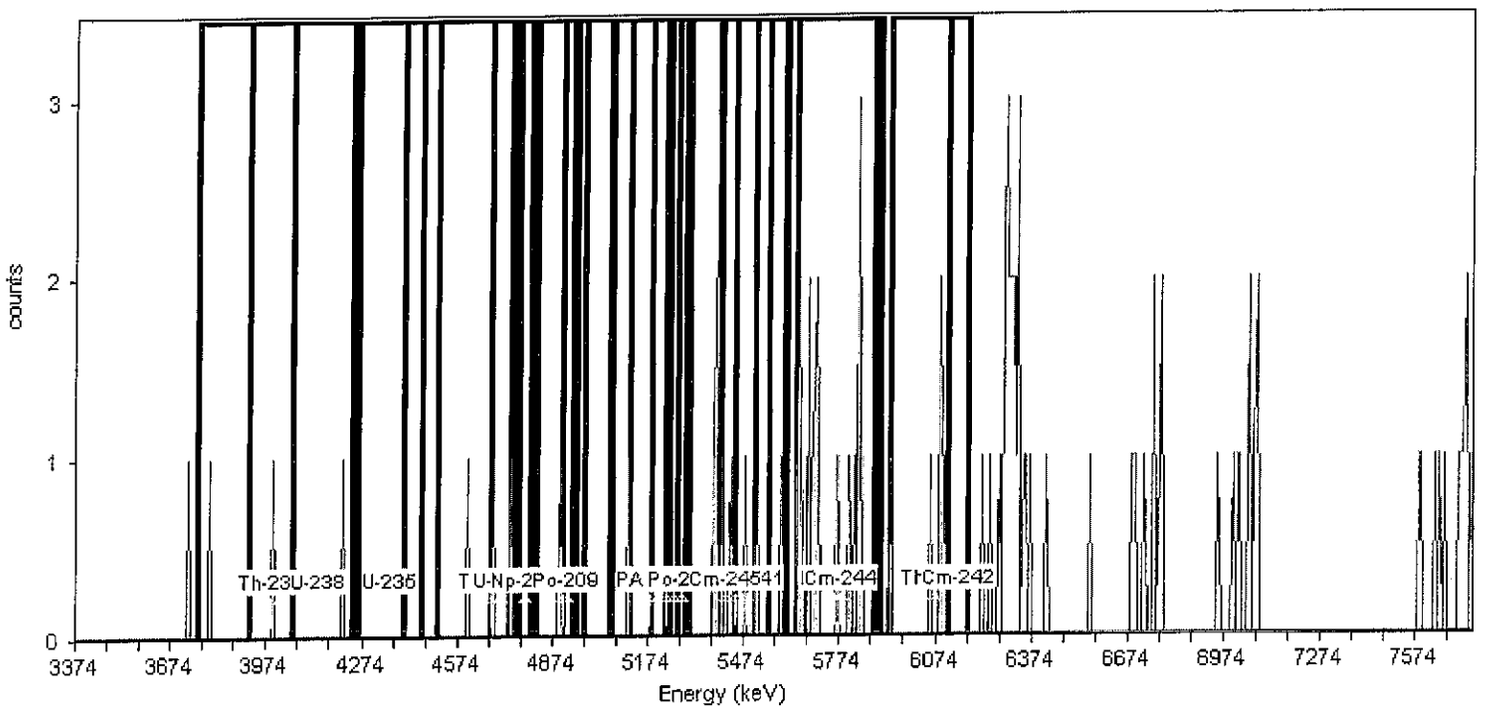
Analyst: 60040

Acquisition

Detector: AV60 , SN: 49-027117
Acquisition Start Date: 7/24/2012 9:07:18PM
Live Time: 960.00 min.
Real Time: 960.01 min.
Calibration Name: IC-9817;AV60-20120610
Calibration Date: 6/10/2012 8:19:43PM

Energy Calibration Equation:
Gain = 7.4575 keV / Ch
Offset = 3,366.95 keV
Quadratic = 0.0000 keV / Ch^2

Efficiency: 26.82% +/- 0.32% TPU(2 sigma)



General Analysis

Analysis Method: Absolute ROI Analysis, Set Name = 11/05_BackgroundROI
Nuclide Library: Background ROI Library
Total Background Counts: 91.00

Spectrum #1 Analysis #1

Batch

Batch Name: July2012b
Description:

Analyst: 60040

Acquisition

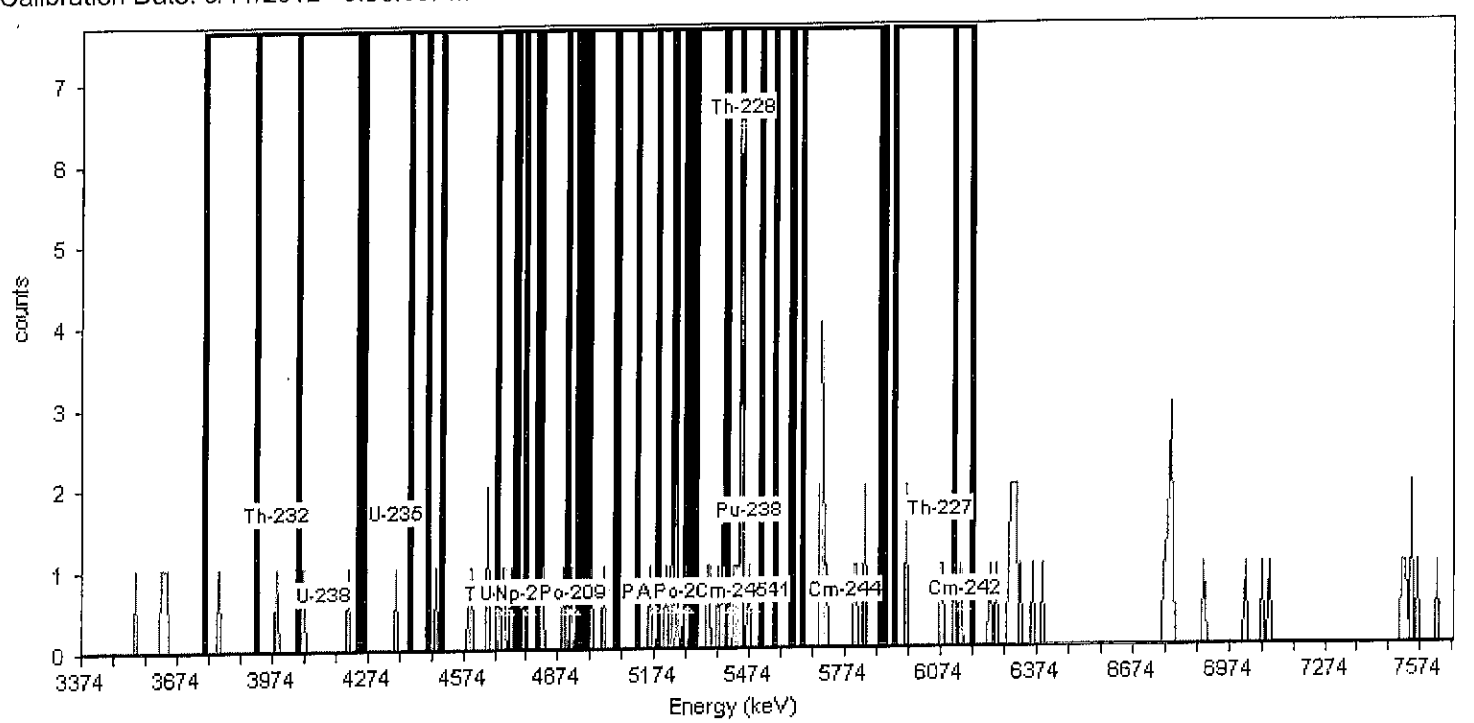
Detector: AV64 , SN: 47-029ee4
Acquisition Start Date: 7/24/2012 9:07:22PM
Live Time: 960.00 min.
Real Time: 960.01 min.
Calibration Name: IC-7107;AV64-20120610
Calibration Date: 6/11/2012 3:30:09PM

Energy Calibration Equation:
Gain = 7.4575 keV / Ch
Offset = 3,366.95 keV
Quadratic = 0.0000 keV / Ch^2

Efficiency: 29.35% +/- 0.32% TPU(2 sigma)



General Analysis

Analysis Method: Absolute ROI Analysis, Set Name = 11/05_BackgroundROI
Nuclide Library: Background ROI Library
Total Background Counts: 92.00

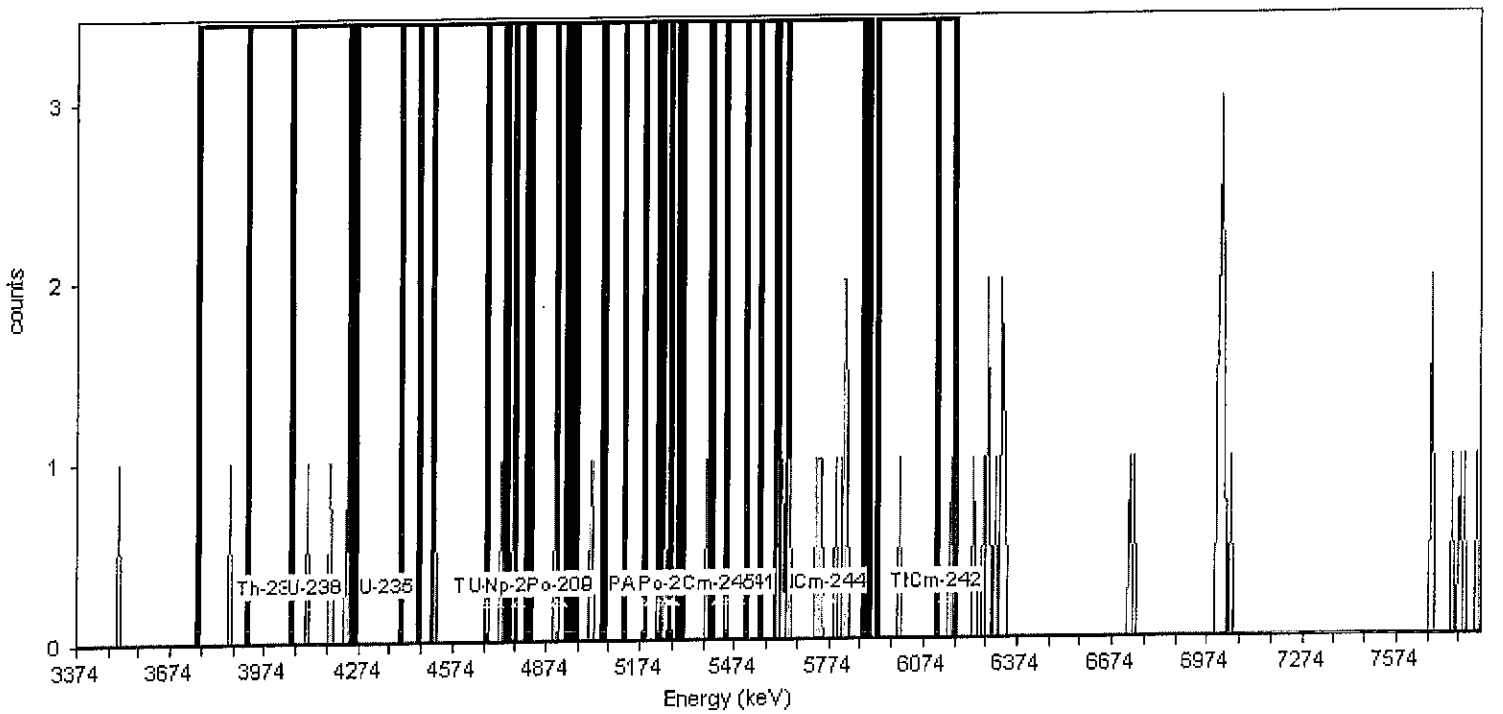
Detector: AV69 , SN: 49-155DD5
Acquisition Start Date: 7/24/2012 9:07:31PM
Live Time: 960.00 min.
Real Time: 960.01 min.
Calibration Name: ICV-8877;AV69-20120611a
Calibration Date: 6/11/2012 4:44:35PM

Energy Calibration Equation:
Gain = 7.4575 keV / Ch
Offset = 3,366.95 keV
Quadratic = 0.0000 keV / Ch^2

Efficiency: 27.62% +/- 0.44% TPU(2 sigma)



General Analysis

Analysis Method: Absolute ROI Analysis, Set Name = 11/05_BackgroundROI
Nuclide Library: Background ROI Library
Total Background Counts: 54.00

Nuclide Summary (ROI)

Sample Name: ICB;AV70
Comment:

Spectrum #1 Analysis #1

Batch

Batch Name: July2012b
Description:

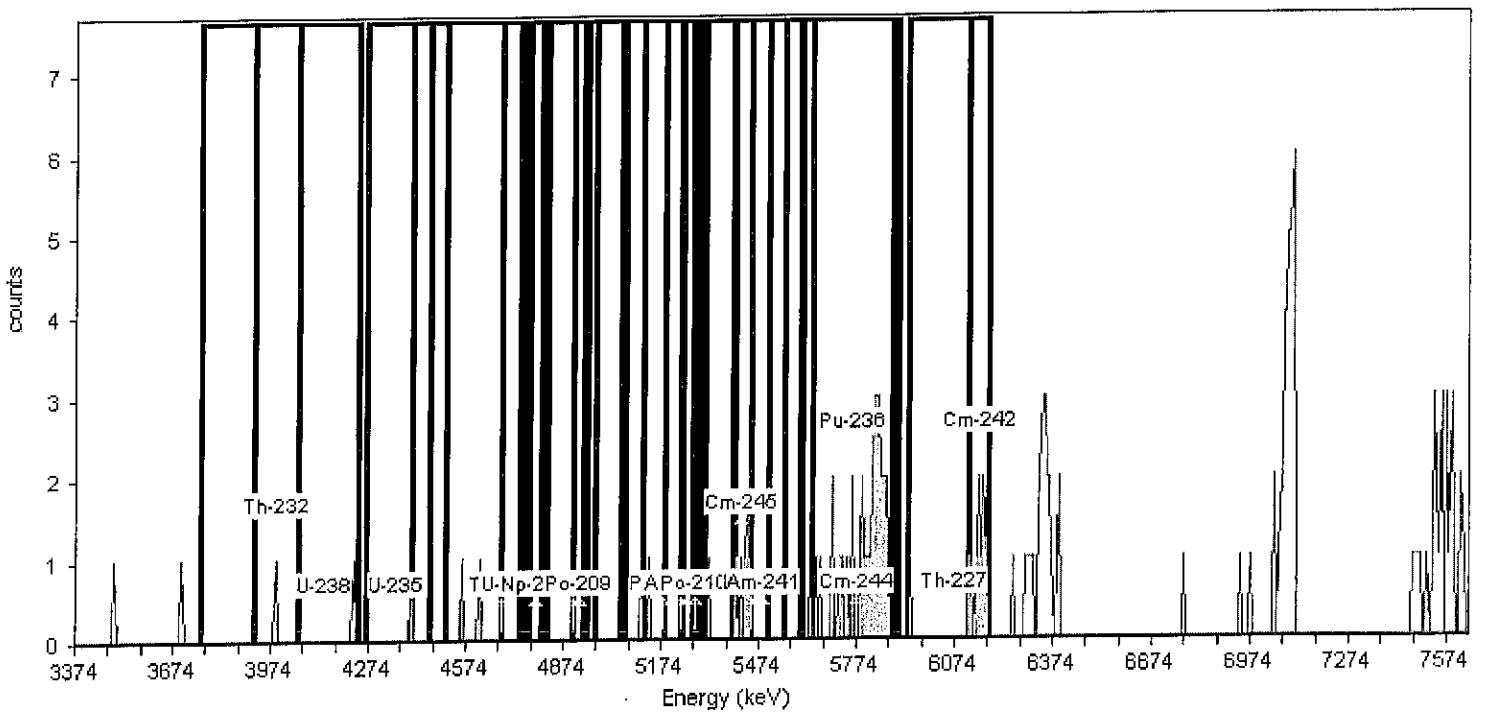
Analyst: 60040

Acquisition

Detector: AV70 , SN: 48-158FF1
Acquisition Start Date: 7/24/2012 9:07:33PM
Live Time: 960.00 min.
Real Time: 960.01 min.
Calibration Name: IC-8879;AV70-20120610
Calibration Date: 6/11/2012 3:32:41PM

Energy Calibration Equation:
Gain = 7.4575 keV / Ch
Offset = 3,366.95 keV
Quadratic = 0.0000 keV / Ch^2

Efficiency: 27.32% +/- 0.35% TPU(2 sigma)



General Analysis

Analysis Method: Absolute ROI Analysis, Set Name = 11/05_BackgroundROI
Nuclide Library: Background ROI Library
Total Background Counts: 136.00

Comment:

Spectrum #1 Analysis #1

Batch

Batch Name: July2012a
Description:

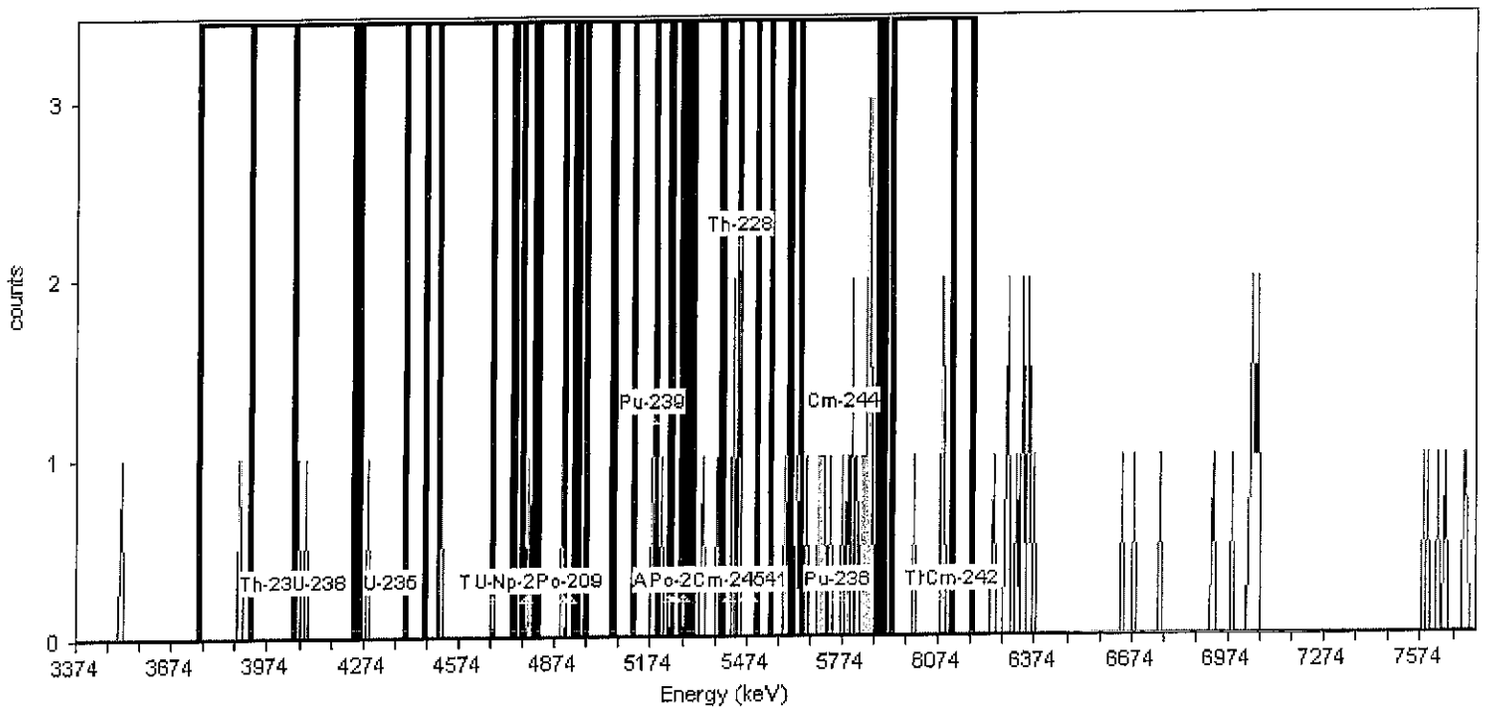
Analyst: 60040

Acquisition

Detector: AV75 , SN: 46-033P6
Acquisition Start Date: 7/23/2012 7:27:05PM
Live Time: 960.00 min.
Real Time: 960.95 min.
Calibration Name: IC-9817;AV75-20120611a
Calibration Date: 6/12/2012 1:04:21AM

Energy Calibration Equation:
Gain = 7.4575 keV / Ch
Offset = 3,366.95 keV
Quadratic = 0.0000 keV / Ch^2

Efficiency: 26.56% +/- 0.32% TPU(2 sigma)



General Analysis

Analysis Method: Absolute ROI Analysis, Set Name = 11/05_BackgroundROI
Nuclide Library: Background ROI Library
Total Background Counts: 67.00

Sample Name: ICB;AV111
Comment:

Spectrum #1 Analysis #1

Batch

Batch Name: July2012b
Description:

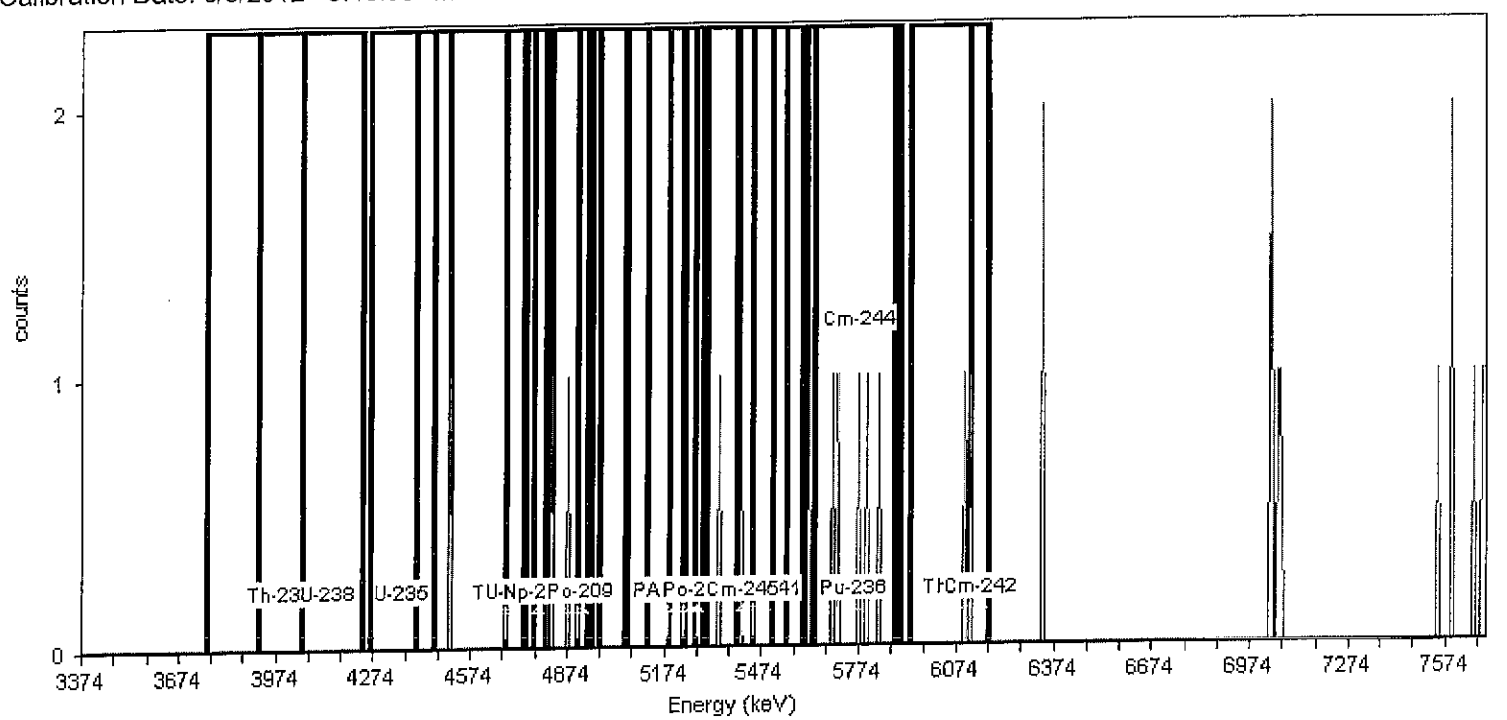
Analyst: 60040

Acquisition

Detector: AV111 , SN: 49-037E6
Acquisition Start Date: 7/24/2012 9:06:19PM
Live Time: 960.00 min.
Real Time: 960.01 min.
Calibration Name: IC-8875;AV111-20120608
Calibration Date: 6/8/2012 8:46:55AM

Energy Calibration Equation:
Gain = 7.4575 keV / Ch
Offset = 3,366.95 keV
Quadratic = 0.0000 keV / Ch²

Efficiency: 28.00% +/- 0.38% TPU(2 sigma)



General Analysis

Analysis Method: Absolute ROI Analysis, Set Name = 11/05_BackgroundROI
Nuclide Library: Background ROI Library
Total Background Counts: 25.00

Acquisition

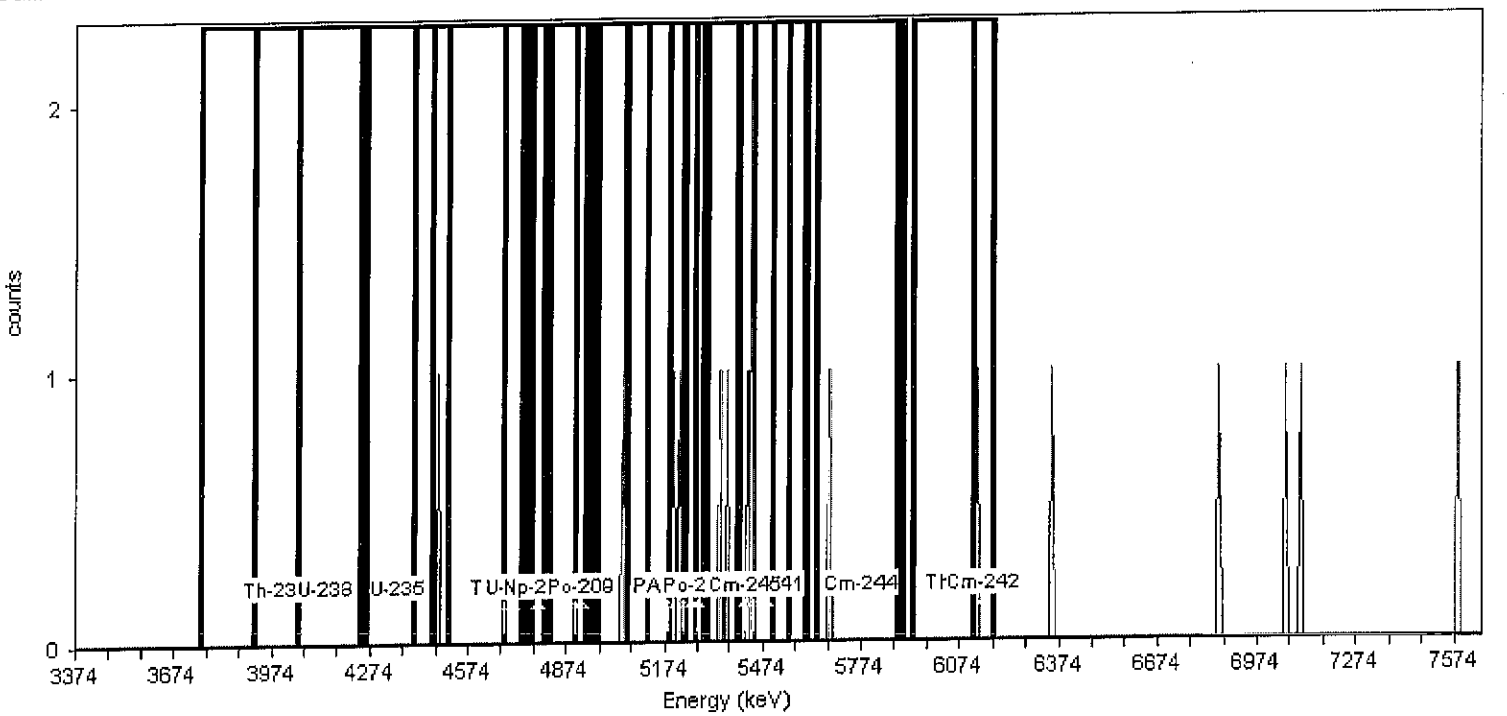
Detector: AV116 , SN: 49-034G1
Acquisition Start Date: 7/24/2012 9:06:25PM
Live Time: 960.00 min.
Real Time: 960.01 min.
Calibration Name: IC-9792;AV116-20120612
Calibration Date: 6/12/2012 3:43:02PM

Energy Calibration Equation:
Gain = 7.4575 keV / Ch
Offset = 3,366.95 keV
Quadratic = 0.0000 keV / Ch^2

Efficiency: 29.14% +/- 0.33% TPU(2 sigma)



General Analysis

Analysis Method: Absolute ROI Analysis, Set Name = 11/05_BackgroundROI
Nuclide Library: Background ROI Library
Total Background Counts: 17.00

Sample

Sample Name: ICB;AV120
Comment:

Spectrum #1 Analysis #1

Batch

Batch Name: July2012b
Description:

Analyst: 60040

Acquisition

Detector: AV120 , SN: 49-037W3
Acquisition Start Date: 7/24/2012 9:06:31PM
Live Time: 960.00 min.
Real Time: 960.01 min.
Calibration Name: IC-9817;AV120-20120608
Calibration Date: 6/8/2012 8:47:18AM

Energy Calibration Equation:
Gain = 7.4575 keV / Ch
Offset = 3,366.95 keV
Quadratic = 0.0000 keV / Ch^2

Efficiency: 26.68% +/- 0.32% TPU(2 sigma)

General Analysis

Analysis Method: Absolute ROI Analysis, Set Name = 11/05_BackgroundROI
Nuclide Library: Background ROI Library
Total Background Counts: 13.00

Sample Name: ICB;AV122
Comment:

Spectrum #1 Analysis #1

Batch

Batch Name: July2012b
Description:

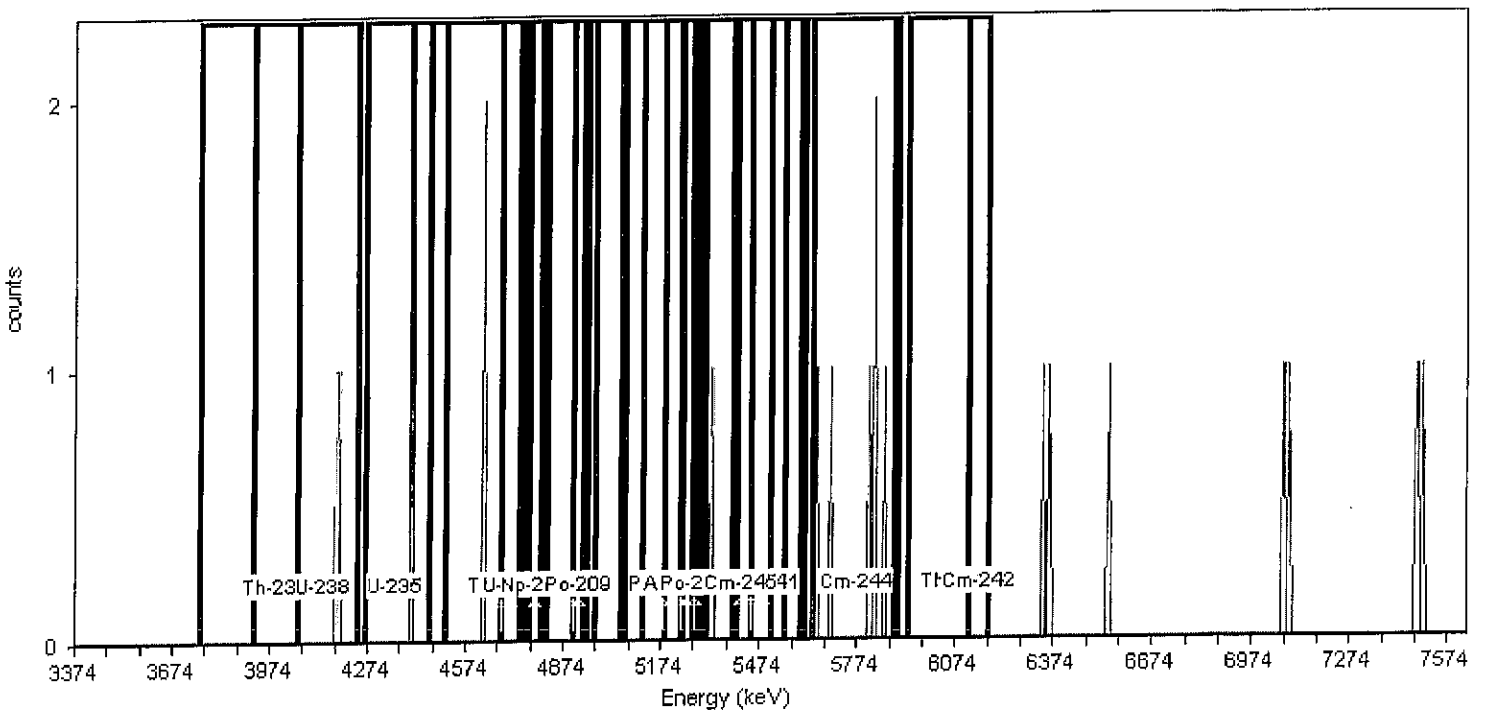
Analyst: 60040

Acquisition

Detector: AV122 , SN: 49-037G4
Acquisition Start Date: 7/24/2012 9:06:33PM
Live Time: 960.00 min.
Real Time: 960.01 min.
Calibration Name: IC-9885;AV122-20120608
Calibration Date: 6/8/2012 8:54:44AM

Energy Calibration Equation:
Gain = 7.4575 keV / Ch
Offset = 3,366.95 keV
Quadratic = 0.0000 keV / Ch^2

Efficiency: 26.78% +/- 0.39% TPU(2 sigma)



General Analysis

Analysis Method: Absolute ROI Analysis, Set Name = 11/05_BackgroundROI
Nuclide Library: Background ROI Library
Total Background Counts: 21.00

Sample

Sample Name: ICB;AV127
Comment:

Spectrum #1 Analysis #1

Batch

Batch Name: July2012b
Description:

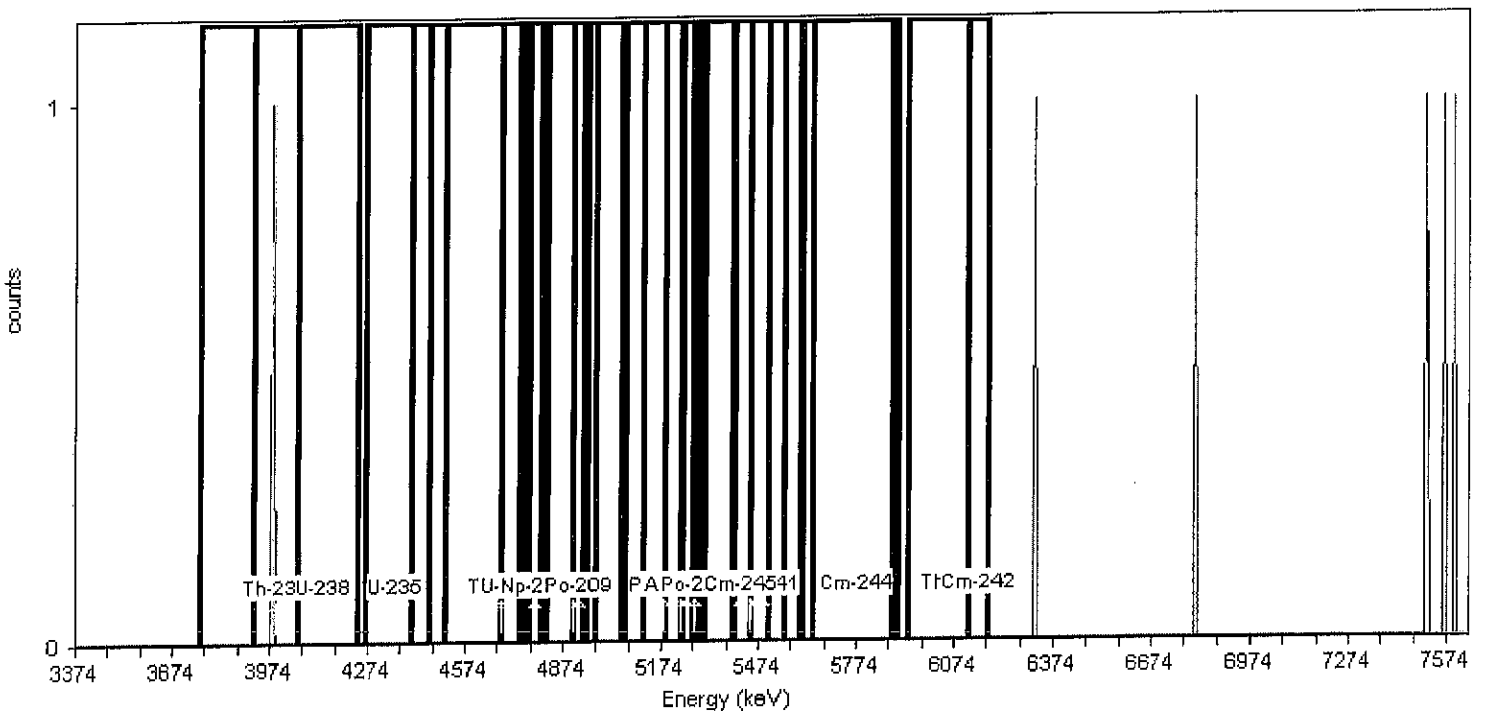
Analyst: 60040

Acquisition

Detector: AV127 , SN: 49-179C5
Acquisition Start Date: 7/24/2012 9:06:40PM
Live Time: 960.00 min.
Real Time: 960.10 min.
Calibration Name: IC-8876;AV127-20120614
Calibration Date: 6/15/2012 11:48:11AM

Energy Calibration Equation:
Gain = 7.4575 keV / Ch
Offset = 3,366.95 keV
Quadratic = 0.0000 keV / Ch^2

Efficiency: 27.75% +/- 0.38% TPU(2 sigma)



General Analysis

Analysis Method: Absolute ROI Analysis, Set Name = 11/05_BackgroundROI
Nuclide Library: Background ROI Library
Total Background Counts: 6.00
