

Joslyn Site News from the Corps

Sent Fri 11/06/2020 10:40 AM

Hello from the U.S. Army Corps of Engineers Buffalo District:

We are pleased to announce that our contractor has completed environmental sampling for the remedial investigation of the Joslyn Formerly Utilized Sites Remedial Action Program (FUSRAP) Site in Fort Wayne, Indiana.

During the investigation the contractor collected soil, groundwater, and surface water samples and completed radiological scans of the on-site buildings that were used during the historic Manhattan Engineer District and Atomic Energy Commission activities.

The collected samples were analyzed, and the Corps will use the results to determine the extent of FUSRAP-related materials at the site, and the potential for those materials to be transported through soil, groundwater, and surface water.

Our engineers and scientists will assess the potential human health and ecological risks from FUSRAP-related materials in the environment and will prepare a comprehensive remedial investigation report.

Additional information regarding the Joslyn Site can be found on the project website at: <https://www.lrb.usace.army.mil/Missions/HTRW/FUSRAP/Joslyn-Manufacturing-and-Supply-Co-Site/>.

If you know someone that is interested in the Joslyn FUSRAP Site and would like to be added to the electronic or postal distribution lists, please ask them to email fusrap@usace.army.mil.
