

Species Conclusions Table

Project Name: RP-15 Hazel River (Adduci)

Date: 6/5/18

Species/Resource Name	Conclusion	ESA Section 7 / Eagle Act	Species Info / Habitat Description	Notes / Determination
Northern long-eared bat (<i>Myotis septentrionalis</i>)	This species has not been identified by DGIF or DNH to occur on the property.	No effect		Search of DGIF and DNH databases do not indicate this species is present on the property.
Yellow lance (<i>Elliptio lanceolate</i>)	An element occurrence (documented in 1995) of the yellow lance is located in the Hazel River along the property near the eastern property corner. Not likely present in the tributaries.	Not likely to adversely effect		No stream channel work is proposed for the Hazel River. E&S controls will be followed for restoration work on the tributaries, to ensure protection for the yellow lance if still present in the Hazel River.
Critical Habitat				
Northern long-eared bat	No critical habitat			
Yellow lance	No critical habitat			
Other (other species not listed above or required coordination for NOAA, DCR, & VDGIF)
