

DOD AREA COST FACTORS (ACF) PAX
Newsletter No 3.2.1, Dated 24 Apr 2018
TABLE 4-1, UFC 3-701-01

1. The attached Area Cost Factors (ACF) supersedes the ACF values published by the PAX Newsletter No 3.2.1, dated 31 Mar 2017, and Table 4-1, Area Cost Factors of the 2017 DoD Facilities Pricing Guide, UFC 3-701-01, Change-13, dated July 2017. The updated ACF shall be used, along with Primary Facilities Unit Costs from the latest issue of the Army PAX Newsletter No 3.2.2, in preparation and review of FY **2020-21** Military Construction, Army (MCA) and Army Family Housing (AFH) projects' DD Forms 1391 and ENG Form 3086 (budget cost estimates). These factors are **NOT** intended for use to develop and/or modify individual facilities **Sustainment Costs, detailed Quantity-Take-offs, Unit Price Book (UPB) line items**, Commercial cost data, or **User Generated unit costs**. These other cost estimating systems and databases have their own methodology and factors for adjusting costs to different locations. This Newsletter is published and maintained on the web at: <http://www.usace.army.mil/CostEngineering/ProgrammingAdministrationandExecutionSystemNe.aspx>
2. The ACF calculation methodology/algorithms were re-evaluated and revised in 2013 by the Tri-Service Cost Engineering Steering Committee to better reflect current market conditions. The revisions to the algorithms which generate the ACF index have caused some fluctuations in area cost factor values, however the relative relationship of construction costs for a location to the National Cost average of ACF=1 has remained unchanged.
3. In general, the Tri-Service Cost Engineering ACF software program evaluates the local costs for a United States (US) market basket of 8 labor crafts, 17 construction materials, and 4 equipment items. These labor, materials, equipment (LME) are representative of types of products, services, and methods used to construct most military facilities in the US. Each of the LME costs is normalized and weighted to represent its contribution to the total cost of a typical facility. The normalized LME is then modified by seven (7) Matrix factors that cover local conditions affecting construction costs. These Matrix factors include weather, seismic, climatic (frost zone, wind load), labor availability, contractor overhead and profit, logistics and mobilization, and local labor productivity versus the US standard. The resultant ACF for each location is normalized again by dividing by the 96 Base-City average to provide a final ACF that reflects the relationship of construction costs between that location and the Base-City average as 1. MILCON ACFs are calculated using a LME ratio of 53/46/1.
4. There is no easy correlation between the current ACF and the previous ACF for a specific location. No common benchmark exists because both the Base City average and the relationships between cities may change from year to year. It is possible, however, to compare differences between several locations in this database with differences between the same locations in previous databases.
5. Both CONUS and OCONUS ACF values are based on a 2017 construction market survey. The CONUS survey covered 340 locations that included 96 Base Cities (two cities per State in the Continental US shown in **bold font**) average construction costs. The OCONUS survey included 83 locations, and was based on a market basket of goods for typical US labor, material, equipment and construction methods. ACF for some locations have been developed/updated utilizing the latest data input from the Services and field offices (Districts).
6. The overall ACF value of the State should be used when the project location has no specific ACF listed in the attached Table. The ACF for the closest location should be used only when market conditions (e.g. material prices, labor rates, labor availability, bidding climate) are similar.

7. CONUS and OCONUS construction market surveys are performed annually. The ACF is not intended to or capable of responding to rapid changes in the construction market for a specific location due to various reasons such as changes in the demand or supply of construction materials or labor, accelerated construction schedule, natural disaster, etc. An increased demand for labor beyond what the local can market can supply, may require the enticement of premium pay, overtime hours, temporary living expenses, and travel expenses. Users may request revisions to published ACFs when such unexpected changes occur. Each request must be initiated by the USACE District senior cost engineer and shall provide updated market basket input in the AFC software with adequate back-up documentation to HQUSACE for validation.

6. Point of contacts for this Newsletter at the US Army Corps of Engineers are: Mr. Brad Wilkes (CEHNC), (256) 895 1855, e-mail Bradley.H.Wilkes@usace.army.mil and alternate POC, Mr. William Dailey (HQUSACE), (202) 761 7503, e-mail William.Dailey@usace.army.mil
